Dry zone of Sri Lanka - Climate-smart intensification of upland and lowland crop production systems Food and Agriculture Organization of the United Nations,World Bank Group,2022-02-18 This guide explores the climate smart intensification of upland and lowland crop production systems in the dry zone of Sri Lanka and provides technical guidance to achieve the productive objectives of selected strategic crops as deemed relevant by the Government of Sri Lanka The first

edition focuses on maize and groundnut upland production systems and on rice lowland production. It provides a quick reference for information on crop production and soil management including crop varieties, nutritional requirements and field equipment. As climate change will result in wider and more severe occurrences of plant pests, the guide relies on integrated pest management practices adapted to climate change. Optimizing the production of these crops calls for the diversification of crop systems using intercrops and cover crops. Additionally, sustainable mechanization is regarded as an essential agricultural production input to optimize labour and land productivity for the sustainable and profitable development of the agriculture sector. Therefore, the guide describes the innovative equipment needed for the sustainable optimization of crop production. To ensure coherent guidance and advice on sustainable farming practices, inputs and technologies, the guide has been developed in cooperation with all stakeholders working in the agriculture sector of Sri Lanka.

Modern Techniques of Rice Crop Production Naeem Sarwar, Atique-ur-Rehman, Shakeel Ahmad, Mirza Hasanuzzaman, 2022-04-09. This book collects all the latest technologies with their implications on the global rice cultivation. It discusses all aspects of rice production and puts together the latest trends and best practices in the rice production. Rice is produced and consumed worldwide and especially an important crop for Asia. It is a staple food in majority of population living in this continent which distinguishes this from rest of the world. Climatic fluctuations, elevated concentrations of carbon dioxide, enhanced temperature have created extreme weather conditions for rice cultivation. Also, increasing pest attacks make the situation complicated for the farmers. Therefore, rice production technology also has to be adjusted accordingly. This book is of interest to teachers, researchers, plant biotechnologists, pathologists, agronomists, soil scientists, food technologists from different parts of the globe. Also, the book serves as additional reading material for students of agriculture, soil science and environmental sciences. National and international agricultural scientists, policy makers will also find this to be a useful read.
