

Experiment No.08

Objective

To study the different parts of CNC machining centre, CNC turning centre, their functions & types.

Theory

The term “machining center” describes almost any CNC milling and drilling machine that includes an automatic tool changer and a table that clamps the work piece in place. On a machining center, the tool rotates, but the work does not. The orientation of the spindle is the most fundamental defining characteristic of a machining center.

Difference between NC and CNC

Difference between NC and CNC is clarified in this experiment where NC is old technology and program is fed to the machine through magnetic tapes. NC has no storage memory while CNC is new technology and program is fed through computer.

Codes

Generally G codes are written in and performed by the CNC processor and operate the motion control part of the control, the M codes are MACHINE codes, these operate most of the basic electrical control functions such as Coolant, Tool changers, safety circuits etc, the M, S& T codes are written in a separate PLC processor, both processors usually communicate with each other over a common bus.

The tool changer and spindle are both configured to suit a particular machine specifics.

CNC Turning

Mechanical Production Lab Manual

Barrett H. Clark

Mechanical Production Lab Manual:

Eventually, you will definitely discover a supplementary experience and realization by spending more cash. nevertheless when? get you receive that you require to get those every needs similar to having significantly cash? Why dont you attempt to acquire something basic in the beginning? Thats something that will guide you to understand even more in the region of the globe, experience, some places, similar to history, amusement, and a lot more?

It is your enormously own mature to deed reviewing habit. in the middle of guides you could enjoy now is **Mechanical Production Lab Manual** below.
