Fishing, Gone? Sid Dobrin, 2019-03-27 Humans have a rapacious relationship with the world's ocean extracting immeasurable quantities of its inhabitants and resources while simultaneously depositing unbound sums of pollution into it If we are to move toward sustainable practices then we must first move toward ways of thinking about fish and fisheries beyond mere economic agendas And there is one group in particular who could make an impact saltwater anglers Recreational saltwater fishing is big business and big culture The industry is one of the largest in the United States but that has not translated into a cohesive effort agenda or ethic Saltwater anglers a diverse group with a range of motivations do not belong to a single organization through which to galvanize significant voting or lobbying power toward conservation regulation As a result federal policymakers have traditionally focused on commercial harvesting interests Dubbed the most contemplative of pastimes recreational fishing provides a valuable perspective on how humans interact with saltwater environments Fishing Gone builds on this tradition of reflection and opens up the saltwater sportfishing life as a method for thinking through the current status of marine fisheries and environment Author Sid Dobrin calls on fellow saltwater anglers to reconsider their relationship to fishes and the ocean the sport can no longer be only about the joy and freedom of fishing but it must also be about living for the ocean living with the ocean and living through the ocean It is about securing the opportunity to fish on while meeting the economic and environmental challenges that lie ahead

The Geography of the Ocean Anne-Flore Laloë, 2016-04-14 Despite the fact that the vast majority of the earth's surface is made up of oceans there has been surprisingly little work by geographers which critically examines the ocean space and our knowledge and perceptions of it This book employs a broad conceptual and methodological framework to analyse specific events that have contributed to the production of geographical knowledge about the ocean These include but are not limited to Christopher Columbus first transatlantic journey the mapping of nonexistent islands the establishment of transoceanic trade routes the discovery of large scale water movements the HMS Challenger expedition the search for the elusive Terra Australis Incognita the formulation of the theory of continental drift and the mapping of the seabed Using a combination of original empirical archival material and cartographic and theoretical sources this book uniquely brings together fascinating narratives throughout history to produce a representation and mapping of geographical oceanic knowledge It questions how we know what we know about the oceans and how this knowledge is represented and mapped The book then uses this representation and mapping as a way to coherently trace the evolution of oceanic spatial awareness In recent years particularly in historical geography discovering and knowing the ocean space has been a completely separate enterprise from discovering and colonising the lands beyond it There has been such focus on studying colonised lands yet the oceans between them have been neglected This book gives the geographical ocean a voice to be acknowledged as a space where history geography and indeed historical geography took place

Ecology and Conservation of Fishes Harold M. Tyus, 2011-10-19 Written as a stand alone textbook for students and a useful reference for professionals in government and private agencies academic institutions and consultants Ecology and Conservation of Fishes provides broad comprehensive and systematic coverage of all aquatic systems from the mountains to the oceans The book begins with overview discussions on the ecology evolution and diversity of fishes It moves on to address freshwater estuarine and marine ecosystems and identifies factors that affect the distribution and abundance of fishes It then examines the adaptations of fishes as a response to constraints posed in ecosystems The book concludes with four chapters on applied ecology to discuss the critical issues of management conservation biodiversity crises and climate change Major marine fisheries have collapsed and there are worldwide declines in freshwater fish populations Fishery scientists and managers must become more effective at understanding and dealing with resource issues If not fish species communities and entire ecosystems will continue to decline as habitats change and species are lost Ecology and Conservation of Fishes has taken a historical and functional

approach to explain how we got where we are providing old and new with a better foundation as ecologists and conservationists and most importantly it awakens senses of purpose and need Past management practices are reviewed present programs considered and the need for incorporating principles of applied ecology in future practices is emphasized
