**Phraseology and Culture in English** Paul Skandera,2008-08-22 The proposition that there is a correlation between language and culture or culture specific ways of thinking can be traced back to the views of Herder and von Humboldt in the late 18th and early 19th centuries It is generally accepted today that a language especially its lexicon influences its speakers cultural patterns of thought and perception in various ways for example through a culture specific segmentation of the extralinguistic reality the frequency of occurrence of particular lexical items or the existence of keywords or key word

combinations revealing core cultural values The aim of this volume is to explore the cultural dimension of a wide range of preconstructed or semi preconstructed word combinations in English The 17 papers of the volume are divided into four sections focusing on particular lexemes e g enjoy and its collocates types of word combinations e g proverbs and similes use related varieties such as the language of tourism or answering machine messages and user related varieties such as Aboriginal English or African English The sections are preceded by a prologue tracing the development of the study of formulaic language and followed by an epilogue which draws together the threads laid out in the various papers The relation between language and culture in general has been explored in a number of important works over the past ten years However the study of the relation between English phraseology and culture in particular has been largely neglected This volume is the first book length publication devoted entirely to this topic     *Popular Mechanics*, 2000-09 Popular Mechanics inspires instructs and influences readers to help them master the modern world Whether it's practical DIY home improvement tips gadgets and digital technology information on the newest cars or the latest breakthroughs in science PM is the ultimate guide to our high tech lifestyle     **American Book Publishing Record**, 2005     **Making Choices about Hydrogen** Lynn Krieger Mytelka, Grant Boyle, 2008 Since the mid 1990s the emergence of a hydrogen economy and the speed with which it will arrive have been vigorously debated As a disruptive technology dominant designs for the production storage and distribution of hydrogen have not yet been established Neither have performance characteristics been achieved to compete with the existing combustion engine though the efficiency and durability of hydrogen fuel cells are improving This publication highlights the uncertainties involved in making choices about hydrogen and fuel cells in planning the development policies on national energy environment and transport sector Publisher's description     *The Transportation Experience* William L.

Krieger, Mytelka, Grant Boyle, 2008 Since the mid 1990s the emergence of a hydrogen economy and the speed with which it will arrive have been vigorously debated As a disruptive technology dominant designs for the production storage and distribution of hydrogen have not yet been established Neither have performance characteristics been achieved to compete with the existing combustion engine though the efficiency and durability of hydrogen fuel cells are improving This publication highlights the uncertainties involved in making choices about hydrogen and fuel cells in planning the development policies on national energy environment and transport sector Publisher's description     *The Transportation Experience* William L. Garrison, David M. Levinson, 2014-01-09 The Transportation Experience explores the historical evolution of transportation modes and technologies The book traces how systems are innovated planned and adapted deployed and expanded and reach maturity where they may either be maintained in a polished obsolesce often propped up by subsidies be displaced by competitors or be reorganized and renewed An array of examples supports the idea that modern policies are built from past experiences William Garrison and David Levinson assert that the planning and control of nonlinear unstable processes is today's central transportation problem and that this is universal and true of all modes Modes are similar in that they all have a triad structure of network vehicles and operations but this framework counters conventional wisdom Most think of each mode as having a unique history and status and each is regarded as the private playground of experts and agencies holding unique knowledge operating in isolated silos However this book argues that while modes have an appearance of uniqueness the same patterns repeat systems policies structures and behaviors are a generic design on varying modal cloth In the end the illusion of uniqueness proves to be myopic While it is true that knowledge has accumulated from past experiences the heavy hand of these experiences places boundaries on current knowledge especially on the ways professionals define

problems and think about processes The Transportation Experience provides perspective for the collections of models and techniques that are the essence of transportation science and also expands the boundaries of current knowledge of the field
