Optics for Ophthalmologists Alfredo A. Sadun, James D. Brandt, 2012-12-06 This manual is written to assist the student of optics or the ophthalmology resident in reviewing optics It is particularly suitable as an optics Board review However it was not intended to accomplish the far greater task of encompassing the entire field of geometric optics or even of teaching all that the ophthalmologist needs to know of visual optics or refraction This manual represents the distillation of lecture notes for an optics Board review course given at the Massachusetts Eye and Ear Infirmary Harvard Medical School for the last seven years This optics lecture series which has also been given at Boston University and at the University of Southern California has traditionally taken place over a week with three two hour sessions Obviously this six hour lecture series could not possibly cover the entire field of optics for clinicians This optics Board review lecture series has customarily involved a few problems at the end of each lecture which then provided a basis for a review that was given at the beginning of the next lecture These problems have always proven a useful means of self testing as well as practice for becoming more comfortable and facile with the concepts involved The problems have not been taken from the American Board of Ophthalmology test materials either written or oral However they incorporate many of the concepts and computational manipulations which are frequently tested on the ophthalmology boards

A Textbook of Optics Suresh Chandra, Mohit Kumar Sharma, 2024-11-08 This book is designed to serve as a textbook for courses offered to upper undergraduate students enrolled in physics and explains the broad spectrum of optics in a student friendly way The textbook covers the entire syllabi of the undergraduate courses being taught at both national and international universities including adequate details of mathematical expressions to help students understand the subject matter The topics covered in this book are reflection refraction cardinal points interference Fresnel diffraction Fraunhofer diffraction lasers and holography fiber optics etc This book explains each topic in a simple and lucid language with the help of solved problems Exercises with multiple choice questions have been given at the end of each chapter for self assessment The detailed coverage and pedagogical tools make this an ideal textbook for students and researchers enrolled in senior undergraduate and beginning postgraduate physics students
