**Finance and Hedging in the Commercial Airline Industry** Tony Webber, 2024-09-13 When there is political tension or war in the Middle East or in Eastern Europe oil and jet fuel prices shoot upward If an airline isn't protected against these higher prices they can devastate its finances and send it quickly into bankruptcy This seemingly happens on a yearly basis Thankfully for most airlines they are able to protect themselves against higher oil and jet fuel prices at least in the short term by hedging using financial instruments The challenge for airlines is to determine which financial instruments they should use in which products they should hedge and how far out from fuel consumption they should hedge This book systematically explores the different financial instruments that airlines have to choose from and in what situations they should be used It will also present the reader with the options airlines have in terms of manipulating operational levers in response to higher fuel prices such as airfares capacity and fleet size once the protective benefits of hedging wear off

*Flying in the Face of Criminalization* Sofia Michaelides-Mateou, Andreas Mateou, 2016-04-15 Two parallel investigations take place after every aviation accident one technical one judicial The former must be conducted with the sole intention of making safety recommendations to prevent the recurrence of similar accidents The judicial investigation however has the intention of identifying those parties that have been at fault and to apportion blameworthiness for criminal and civil liability Consequently this results in a predicament for those parties that have been identified as having played a role in the accident a dilemma between not supplying information aimed at enhancing safety and preventing future accidents and on the other hand supplying such information which may possibly be used against them

in subsequent criminal prosecution The situation is compounded by inconsistent approaches between different legal systems aviation professionals may find themselves faced with criminal charges in one country but not in another and they may also be unsure as to whether statements given during the technical investigation could be used against them in a court of law Aviation safety is to a large extent built upon the trust placed by pilots ATCOs and other aviation professionals in the process of accident investigation This book examines the growing trend to criminalize these same people following an accident investigation and considers the implications this has for aviation safety
