- Know all vocab (on Quizlet)
- Know/describe the different parts of an atom
- Describe the atomic model timeline
  - Scientists, theories, discoveries, models, experiments
- Know what quarks are
- Know what happens to a neutral atom when the number of protons, neutrons, or electrons change
- Be able to describe the three types of nuclear decay

### Different Parts of an Atom:

- **Electrons** are very small particles inside an atom with one negative charge (-1). The closer electrons are to the nucleus, less energy.
- The **nucleus** is a small area in the center of the atom where most of its mass and positive charge is concentrated
- A **proton** is an atomic particle that has one positive charge (+1)
- A **neutron** is a neutral particle that exists in the nucleus of an atom
- An **electron cloud** is an area around an atomic nucleus where an electron is most likely to be located
- A **quark** is the smallest particle in an atom, and it is what protons and neutrons are made of

### The Atomic Model Timeline:

#### DEMOCRITUS:

- He was a philosopher who challenged the popular idea of matter.
- His atomic theories were that atoms are small solid objects that cannot be divided, created, or destroyed. Also, that atoms are constantly moving in empty space, and that different types of matter are made of different types of atoms. His last theory is that the properties of the atoms determine the properties of matter.

#### DALTON:

- In the late 1700s, John Dalton revisited the idea of atoms.
- His atomic theories were that all matter is made of atoms that can't be divided, created, or destroyed. Also, that during a chemical reaction, atoms of one element can't be converted into atoms of another element. The third theory is that atoms of one element are identical to each other but different from atoms of another element. The last theory is that atoms combine in specific ratios.

Instructional Models in Physical Education Michael Metzler, 2017-06-30 Ensures that physical educators are fully armed with a comprehensive plan for incorporating instructional models in their teaching Instructional Models for Physical Education has two primary goals for its readers The first is to familiarize them with the notion of model based instruction for physical education including the components and dimensions that determine a model s pattern of teaching and how to select the most effective model for student learning in a particular unit The second goal is to describe each of the instructional models in such a way to give readers enough information to use any of the models with confidence and good results The book includes everything readers will need for planning implementing and assessing when teaching with instructional models It will help readers incorporate research based practices in their lessons adapt activities to include students of varying abilities and teach to standards Models tied to NASPE standards The author has revised the third edition to show how using the instructional models can help teachers meet specific NASPE standards The book demonstrates the connection of NASPE standards with the models and clarifies that connection for students In addition a table in each of the

model chapters shows explicitly how the model aligns with NASPE standards      **Research in Education** ,1972      E.A. Burt, Historian and Philosopher D.
