Use of Representations in Reasoning and Problem Solving Lieven Verschaffel, Erik de Corte, Ton de Jong, Jan Elen, 2010-09-13

Within an increasingly multimedia focused society the use of external representations in learning teaching and communication has increased dramatically Whether in the classroom university or workplace there is a growing requirement to use and interpret a large variety of external representational forms and tools for knowledge acquisition problem solving and to communicate with others

Use of Representations in Reasoning and Problem Solving brings together contributions from some of the world s leading researchers in educational and instructional psychology instructional design and mathematics and science education to document the role which external representations play in our understanding learning and communication

Traditional research has focused on the distinction between verbal and non verbal representations and the way they are processed encoded and stored by different cognitive systems The contributions here challenge these research findings and address the ambiguity about how these two cognitive systems interact arguing that the classical distinction between textual and pictorial representations has become less prominent

The contributions in this book explore how we can theorise the relationship between processing internal and external representations what perceptual and cognitive restraints can affect the use of external representations how individual differences affect the use of external representations how we can combine external representations to maximise their impact how we can adapt representational tools for individual differences

Using empirical research findings to take a fresh look at the processes which take place when learning via external representations this book is essential reading for all those undertaking postgraduate study and research in the fields of educational and instructional psychology instructional design and mathematics and science education

Investigating Classroom Interaction, 2009-01-01 This book adds a new perspective to existing research methodology literature on analyzing social interactions in the classroom. Not only does this book introduce multiple research methodologies for analyzing classroom interactions, but it also demonstrates these methodologies at work in different empirical research studies. The authors of this book are all internationally well recognized for their research work on the social life of classrooms and now, for the first time, they provide concrete accounts of the ways in which the theories and methodologies they have chosen to guide their research work function in action. These "black boxes" or tacit knowledge of conducting different types of analyses on classroom interaction have seldom been opened up in such a concrete way in the existing research literature. This book is an edited collection of papers introducing strands of research on classroom interaction whose logic of inquiry illuminates different approaches, analyses, and interpretations of social interactions and discourses in contemporary classroom settings. The methodological approaches discussed draw on studies of language and discourse, ethnography, as well as on sociological, psychological, and domain-specific analyses. In recognizing the complexity and challenges in mapping out the complex research territory focusing on classroom interactions, the prime goal of the book is to build a complimentary context for discussion of the ways in which different approaches to classroom interaction are realized and how they produce different analyses because of their purpose, conceptual framework, and methodological choice. The illumination of diverse approaches to classroom interaction and discourse is believed to demonstrate the potential and challenges each strand of research is likely to bring towards understanding the psychological, social, and cultural life of the classroom and how these mediate the situated practice of teaching and learning in today's schooling. This book is targeted towards researchers and graduate students working within the field of social sciences, education, and psychology. It also makes an excellent text for courses in research methodology, education, and related fields.
