Van Trees, Kristine L. Bell, 2013-04-15 Originally published in 1968 Harry Van Trees's *Detection Estimation and Modulation Theory Part I* is one of the great time tested classics in the field of signal processing Highly readable and practically organized it is as imperative today for professionals researchers and students in optimum signal processing as it was over thirty years ago The second edition is a thorough revision and expansion almost doubling the size of the first edition and accounting for the new developments thus making it again the most comprehensive and up to date treatment of the subject With a wide range of applications such as radar sonar communications seismology biomedical engineering and radar astronomy among others the important field of detection and estimation has rarely been given such expert treatment as it is here Each chapter includes section summaries realistic examples and a large number of challenging problems that provide excellent study material This volume which is Part I of a set of four volumes is the most important and widely used textbook and professional reference in the field **Response and Catastrophe Mechanisms of Geotechnical Underground Exploration: Theories and Numerical Modeling** Yongqiang Zhou, Shaobo Chai, Kai Liu, 2024-11-18 The pursuit of deep seated resources and space utilization has emerged as a strategic direction for global superpowers in the new era with a growing emphasis on diving into the depths of the Earth The rapid urbanization has resulted in an accelerated demand for underground exploration particularly with regards to major infrastructure projects

such as railways and highways that often require the construction of numerous mountain and water crossing tunnels Also deep seated energy exploration and storage frequently involve complex challenges e g a range of geological hazards including earthquakes rock bursts large and uneven deformations and instability induced by blasting or fault slippage in rock and soil masses Therefore the response of geological formations and structures in underground exploration the mechanisms of disasters and the corresponding evaluation methods are crucial issues in ensuring the construction and safe operation of such projects
