2024-25 CTET Primary Level Class VI to VIII Math and Science Solved Papers YCT Expert Team , 2024 25 CTET Primary Level Class VI to VIII Math and Science Solved Papers 792 1495 E This book contains 25 sets of the previous year s papers and also covers Child Development Pedagogy Hindi and English Language **Math Made a Bit Easier** Larry Zafran,2009-11-02 An independent book written and self published by former math teacher and private math tutor Larry Zafran Students are justified in proclaiming that math is hard but there is a specific reason why they feel this way The author maintains that the struggle can be lessened by following the roadmap presented but it will take time and effort on the part of the student Since math is often not properly taught it is often not properly learned Anything that hasn t truly been learned regardless of subject is hard Once the various concepts are more secure and the student s gaps in understanding have been addressed math will have been made a bit easier as promised by the book s title However the book does not imply that learning math is fast fun or easy Most of the book s content is comprised of the roadmap of topics for a student to work through at his her own pace Like all paths it begins at the beginning in this case starting with a review of basic arithmetic followed by basic operations negative numbers fractions decimals percents and basic probability and statistics This is the foundation of all math The space devoted to each topic is proportional to how difficult most students find the topic as well as how important the topic is in preparation for later math studies The material is explained conversationally and in plain

English as promised by the book's subtitle without talking down to the reader and without the use of contrived examples or cartoonish illustrations. The book concludes with a chapter on how to effectively study math and improve scores on exams. Like the rest of the book, the chapter takes a unique standpoint on the matter and offers suggestions which include how to get oneself into the proper mental and emotional mindset for being successful with math.

Syllabus in Commercial Subjects for Four-year High Schools University of the State of New York, 1925 *Basic Algebra and Geometry Made a Bit Easier: Concepts Explained In Plain English, Practice Exercises, Self-Tests, and Review* Larry Zafran, 2010-03-18. This is the fourth book in the Math Made a Bit Easier series by independent author and math tutor Larry Zafran. As the second main book of the series, it builds upon the first book which covered key topics in basic math. Before working with this book, it is absolutely essential to have completely mastered all of the material from the first book. Continuing the roadmap which began with the first book, this book covers the basics of the following topics of algebra and geometry: Expressions, equations, inequalities, exponents, factoring, the FOIL method, lines, angles, area, perimeter, volume, triangles, the Pythagorean Theorem, linear equations, and the Cartesian coordinate plane. Again, if the prerequisite material from the first book has not been fully learned, the student will almost certainly proclaim that this book and its material are hard and will continue to feel frustrated with math. There is no way to avoid learning math step by step at one's own pace. This book emphasizes concepts which commonly appear on standardized exams. While it does not go into great detail about any concept, it explains the material conversationally and in plain English. Some practice exercises and self-tests are included. Mastery of these concepts will likely be sufficient for the student to achieve his/her math goals, but more advanced exams may require some knowledge of material presented in later books in the series.
