

Environmental Science (uses scientific approaches of observation and analysis to understand the natural systems around us)

Chapter 1

- List several major **themes** in environmental science. **Water, air quality, and climate change**
- Explain the idea of sustainability and some of its aims.
- Why are scientists cautious about claiming absolute proof of particular theories?
- What is **critical thinking**, and why is it important in environmental science? **Stepping back to examine what you think and why you think it or why someone believes what they do. Acknowledging uncertainty is one part of critical thinking.**
- Why do we use **graphs** and data to answer questions in science? **Publicizing rates of change**
- List several examples of progress in environmental quality.
- Identify several people who helped shape our ideas of resource conservation and preservation - why did they promote these ideas when they did?
- Outline the steps of the scientific methods. **Helps us understand the world and make reasoned decisions.**

1. Observation and evaluation of factors

Restoration includes replanting, agroforestry (products like nuts and fruits w/ sustainable value), monitoring, protecting and rebuilding.

Natural systems – biodiversity, water resources, climate systems, cultural systems of knowledge, technology and ideas that shape the way we use and occupy the environment.

Climate change – Earth retains heat near the surface, that's why it is hot here and not in space. By 2100, the earth temp will rise 3 to 12 degrees Fahrenheit

Clean water – Most critical resource. 40% of the world's population's water demands exceed supplies.

Air quality – China and India air quality is worsening.

Science and the Global Environment Alan McIntosh, Jennifer Pontius, 2016-09-03 Case Studies for Integrating Science and the Global Environment is designed to help students of the environment and natural resources make the connections between their training in science and math and today's complex environmental issues. The book provides an opportunity for students to apply important skills, knowledge, and analytical tools to understand, evaluate, and propose solutions to today's critical environmental issues. The heart of the book includes four major content areas: water resources, the atmosphere and air quality, ecosystem alteration, and global resources and human needs. Each of these sections features in-depth case studies covering a range of issues for each resource, offering rich opportunities to teach how various scientific disciplines help inform the issue at hand. Case studies provide readers with experience in interpreting real data sets and considering alternate explanations for trends shown by the data. This book helps prepare students for careers that require collaboration with stakeholders and co-workers from various disciplines. Includes global case studies using real data sets that allow readers to practice interpreting data and evaluating alternative explanations. Focuses on critical skills and knowledge, encouraging readers to apply science and math to real-world problems. Employs a system-based approach linking air, water, and land resources to help readers understand that cause-effect may be complex and solutions to environmental problems require multiple perspectives. Includes special features such as links to video clips of scientists at work, boxed information, a solutions section at the end of each case study, and practice exercises.
