The National Science Foundation's Materials Research Science and Engineering Centers Program National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Solid State Sciences Committee, MRSEC Impact Assessment Committee, 2007-10-31 The Materials Research Science and Engineering Centers MRSEC Impact Assessment Committee was convened by the National Research Council in response to an informal request from the National Science Foundation. Charged to examine the impact of the MRSEC program and to provide guidance for the future, the committee included experts from across materials research as well as several from outside the field. The committee developed a general methodology to examine the MRSEC centers and after extensive research and analysis came to the following conclusions: MRSEC center awards continue to be in great demand. The intense competition within the community for them indicates a strong perceived value. Using more quantitative measures, the committee examined the performance and impact of MRSEC activities over the past decade in the areas of research facilities, education and outreach, and industrial collaboration and technology transfer. The MRSEC program has had important impacts of the same high standard of quality as those of other multi-investigator or individual investigator programs. Although the committee was largely unable to attribute observed impacts uniquely to the MRSEC program, MRSECs generally mobilize efforts that would not have occurred otherwise. Because of an observed decline in the effectiveness of the centers, the

committee recommended a restructuring the MRSEC program to allow more efficient use and leveraging of resources The new program should fully invest in centers of excellence as well as in stand alone teams of researchers to allow tighter focus on key strengths of the program In its report the committee outlines one potential vision for how this might be accomplished in a revenue neutral fashion Information Literacy for Science and Engineering Students Mary DeJong,2024-08-22 This engaging handbook gives students and working scientists and engineers the information literacy skills they need to find evaluate and use information Beginning with a strong foundation in the utility structure and packaging of information this useful handbook helps students and working professionals decode real world information literacy problems Mary DeJong provides a compelling context and rationale for the skills scientists and engineers need to succeed in challenging careers that rely on the successful discovering and sharing of complex information Students will appreciate the in depth information on sources especially those needed for research assignments and scientists and engineers who write for publication will benefit from chapters on searching databases and organizing and citing sources Written with science and engineering students and professionals in mind this book is thorough well paced engaging and even funny *The 5-year Outlook on Science and Technology* ,1981 Future Materials Science Research on the International Space Station National Research Council,Division on Engineering and Physical Sciences,National Materials Advisory Board,Commission on Engineering and Technical Systems,1997-11-27 *International Public Procurement* Khi V.
