Describe the various functions of proteins and how changes to the primary structure can affect a protein's function.

Explain how a protein can be caused to denature and how such changes affect its structure and function.

Objective 1.1: Identify the primary elements that make up proteins

C, H, O, N, S

Objective 1.2: Apply the terms polar & nonpolar to amino acids & proteins

Both are polar & hydrophilic

Objective 1.3: Draw the basic structure of an amino acid

central carbon, amino group, carboxyl group, R

Objective 1.4: Describe how the variety of different amino acids are classified

Proteins are classified by their side chains

Objective 1.5: Describe the primary structure of proteins including the location & type of bonds that stabilize it

It is how the amino acids joined by peptide bonds

Objective 1.6: Describe the secondary structure of proteins including the location & type of bonds that stabilize it

Refolded, using hydrogen bonds to hold the alpha helix & beta pleated sheet together

Objective 1.7: Describe the tertiary structure of proteins including the location & type of bonds that stabilize it

Folded & all bonds are used

Objective 1.8: Describe the quaternary structure of proteins including the location & type of bonds that stabilize it

completely defined in its shape & multiple disulfide bonds are used

Objective 1.9: Describe the various functions of proteins & how changes in the primary structure can affect a protein's function

Proteins do everything, & in primary structure, if the structure is changed, so could the function & amino acid chains

Objective 1.10: Explain how a protein can be caused to denature & how such changes affect its structure & function

If a protein gets too hot & it unravels, & either can't function correctly or at all

A Guide to Protein Isolation C. Dennison,2003-04-30 It is a truism of science that the more fundamental the subject the more universally applicable it is Nevertheless it is important to strike a level of fundamentalness appropriate to the task in hand For example an in depth study of the mechanics of motor cars would tell one nothing about the dynamics of traffic Traffic exists on a different level it is dependent upon the existence of motor vehicles but the physics and mathematics of traffic can be adequately addressed by considering motor vehicles as mobile blobs with no consideration of how they become mobile To start a discourse on traffic with a consideration of the mechanics of motor vehicles would thus be inappropriate In writing this volume I have wrestled with the question of the appropriate level at which to address the physics underlying many of the techniques used in protein isolation I have tried to strike a level as would be used by a mechanic with perhaps a slight leaning towards an engineer i e a practical level offering appropriate insight but with minimal mathematics Some people involved in biochemical research have a minimal grounding in chemistry and physics and so I have tried to keep it as simple as possible
