Smashing Speculation by Commodity Index Funds Scott H. Irwin, Dwight R. Sanders, 2023-04-25 Commodity futures prices exploded in 2007-2008 and concerns about a new type of speculative participant in commodity futures markets began to emerge. The main argument was that unprecedented buying pressure from new commodity index investors created massive bubbles that resulted in prices substantially exceeding fundamental value. At the time, it was not uncommon to link concerns about speculation and high prices to world hunger, food crises, and civil unrest. Naturally, this outcry resulted in numerous regulatory proposals to restrict speculation in commodity futures markets. This book presents important research on the impact of index investment on commodity futures prices that the authors conducted over the last fifteen years. The eleven articles presented in the book follow the timeline of our involvement in the world-wide debate about index funds as it evolved after 2007. We also include an introductory chapter, new author forewords for each article chapter, and a lessons learned chapter to round out the book. Policy makers, researchers, and market participants will find the book not only functions as useful documentation of the debate but also as a natural starting point when high commodity prices inevitably create the next speculation backlash.

be explained and modelled on the basis of a careful examination of the decision process which leads traders to interact and fix the equilibrium prices The papers by Pec cati Luciano Ferrari and Cornaglia belong to this category and help considerably understand the performance of markets which are relatively far from perfection owing to thinness frictions taxation and the like This is indeed the case for some European Exchanges The very foundations of quantitative financial analysis have been discussed in the contributions of Luciano Canestrelli Uberti and Van der Meulen The classical although recent advances on the pricing of derivative securities have been analyzed and applied by Kremer Hallerbach and Jensen Nielson thus demonstrating that established theories still provide space for a deeper investigation Another major topic of interest relates to empirical studies about how markets behave with respect to theoretical models In this respect the contributions of Viren Bradfield and Wilkie Pollock are quite significant They present evidence based on real data discussed in the light of advanced statistical techniques It is apparent that Corporate Finance and Capital Markets are becoming more and more related and interacting with each other
