**The Human Microbiota in Health and Disease** Mike Wilson, 2018-09-03 A human being consists of a mammalian component and a multiplicity of microbes collectively referred to as the microbiota or microbiome with which it has a symbiotic relationship The microbiota is comprised of a variety of communities the composition of each being dependent on the body site it inhabits This community variation arises because the numerous locations on a human being provide very different environments each of which favors the establishment of a distinct microbial community Each community consists of bacteria fungi and viruses with in some cases archaea and or protozoa It is increasingly being recognized that the indigenous microbiota plays an important role in maintaining the health of its human host However changes in the overall composition of a microbial community at a body site or an increase in the proportion of a particular species in that community can result in
