Sidetracked Francesca Gino, 2013-02-12 You may not realize it but simple irrelevant factors can have profound consequences on your decisions and behavior often diverting you from your original plans and desires Sidetracked will help you identify and avoid these influences so the decisions you make do stick and you finally reach your intended goals Psychologist and Harvard Business School professor Francesca Gino has long studied the factors at play when judgment and decision making collide with the results of our choices in real life In this book she explores inconsistent decisions played out in a wide range of circumstances from our roles as consumers and employees what we buy how we manage others to the

choices that we make more broadly as human beings who we date how we deal with friendships From Gino s research we see when a mismatch is most likely to occur between what we want and what we end up doing What factors are likely to sway our decisions in directions we did not initially consider And what can we do to correct for the subtle influences that derail our decisions The answers to these and similar questions will help you negotiate similar factors when faced with them in the real world For fans of Dan Ariely and Daniel Kahneman this book will help you better understand the nuances of your decisions and how they get derailed so you have more control over keeping them on track **Metacognition** Janet Metcalfe, Arthur P. Shimamura, 1994-04-07 Metacognition offers an up to date compendium of major scientific issues involved in metacognition The twelve original contributions provide a concise statement of theoretical and empirical research on self reflective processes or knowing about what we know Self reflective processes are often thought to be central to what we mean by consciousness and the personal self Without such processes one would presumably respond to stimuli in an automatized and environmentally bound manner that is without the characteristic patterns of behavior and introspection that are manifested as plans strategies reflections self control self monitoring and intelligence A Bradford Book **Handbook of Metamemory and Memory** John Dunlosky, Robert A. Bjork, 2013-10-18 This Handbook examines the interplay between metamemory and memory Each contributor discusses cutting edge theory and research that in some way showcases the symbiotic relationship between metamemory and memory Together these chapters support a central thesis which is that a complete understanding of either metamemory or memory is not possible without understanding their mutual influence The inspiration for this volume was the life and research of Thomas O Nelson whose pioneering and influential research in the fields of metamemory and memory consistently highlighted their integrated nature **A Cognitive Approach to Situation Awareness: Theory and Application** Sébastien Tremblay, 2017-03-02 The importance of situation awareness SA in assessing and predicting operator competence in complex environments has become increasingly apparent in recent years It has been widely established that SA is a contributing factor to many commercial and military accidents and incidents Yet determining exactly what constitutes SA is a very difficult task given the complexity of the construct itself and the many different processes involved with its acquisition and maintenance This volume brings together recent developments from researchers and practitioners from around the world who are studying and applying SA from a cognitive perspective The 41 contributors represent many different theoretical perspectives research approaches and domains of application Each chapter has a primary emphasis around one of three main topics theory measurement and application and examines the considerable inter linkage between them To bring further coherence to the book all of the contributors received draft manuscripts of those chapters most relevant to their own Designed to be completely international and interdisciplinary the authors themselves present varied perspectives from academic departments and industrial organisations from around the world and from broad applications with contributions from researchers in the domains of process control sport aviation transportation and

command and control The readership includes practitioners academics and researchers within human factors ergonomics and industrial psychology Graduate and Undergraduate students specialising within these areas during their final year
