

Dragon Genetics

— Independent Assortment and Genetic Linkage

Hereditary traits (morphological and physiological characteristics) follow predictable patterns of inheritance, and the laws governing these patterns (Mendel's experiments on *Pisum sativum*) are extremely powerful tools for understanding how traits are passed.

In this activity you will study the patterns of inheritance of multiple genes in (imaginary) dragons. These dragons have two pairs of homologous chromosomes in each cell. You will see that, since genes are carried on chromosomes, the patterns of inheritance are determined by the behavior of chromosomes during mitosis and fertilization.

The Law of Independent Assortment — Inheritance of Genes on Different Chromosomes

For this activity, we will only consider one gene on each chromosome. These genes are described in the following table.

	Dominant Alleles	Recessive Alleles
Chromosome 1	W = long wings	w = no wings
Chromosome 2	H = big horns	h = small horns

The mother dragon is heterozygous for the wing gene (Ww) and the horn gene (Hh). The father is homozygous recessive for the wing gene (ww) and the horn gene (hh). What phenotypic traits will each parent have? (Homozygous traits are the observable bodily characteristics.) Draw the appropriate characteristics for each parent.

Mother

Father

Review of Inheritance of Single Genes

Draw a Punnett Square to show the inheritance of the horn alleles for a mating between this mother and father.

On average, what fraction of the baby dragons will have big horns?

¹ Mendel's first experiments used pea plants (*Pisum sativum*). A flower color gene and a gene for seed shape were used. Mendel's experiments with pea plants are described in <http://www.ck12.org/section/mendels-experiments/>.

Teacher's Guide to Using the Next Generation Science Standards With Gifted and Advanced Learners Cheryll M. Adams, Alicia Cotabish, Debbie Dailey, 2021-09-23 A Teacher's Guide to Using the Next Generation Science Standards With Gifted and Advanced Learners provides teachers and administrators with practical examples of ways to build comprehensive coherent and rigorous science learning experiences for gifted and advanced students from kindergarten to high school. It provides an array of examples across the four domains of science: physical sciences, Earth and space sciences, life sciences, and engineering technology and applications of science. Each learning experience indicates the performance expectation addressed and includes a sequence of activities, implementation examples, connections to the CCSS Math and CCSS ELA, and formative assessments. Chapters on specific instructional and management strategies, assessment, and professional development suggestions for implementing the standards within the classroom will be helpful for both teachers and administrators.

The Answer to Nearly Everything Peter Franklin, 2012-02 The only information we have on Atlantis is from a very ancient Egyptian account that describes it as bigger than all their neighbours combined. Why is this fact ignored by most of the fanciful theories? From Atlantis to our current scientific predictions, the truth about so many things becomes clear and obvious only if all the facts are collected and examined, yet many people just select those that agree with their thinking. The resulting conflict between experience and belief, truth and distortion, or good and bad is only resolved when science, philosophy, and theology are harmonized and examined as aspects of one universal truth.

Life's Vital Link Y. W. Loke, 2013-05-23 The development of the placenta was a pivotal event in evolution. Without it, we would still be laying eggs instead of giving birth to live offspring. It represents the critical link between the foetus and the mother, but its character is extraordinary: it is in effect a foreign tissue that invades the mother's body. Compared to many other animals, the human placenta represents a particularly aggressive body. But how is it managed and controlled? How did such an organ evolve in the first place? And why is it tolerated by the mother? Y. W. Loke explores the nature of the placenta and what it can tell us about evolution, development, and genetics.

Sunshine in the Dragon's Heart Jaime Samms, 2018-12-04 When Sunny retires to the northern Ontario wilderness to mourn his parents' deaths, he's hoping the change of scenery will afford him some peace and quiet. His hopes are soon spectacularly dashed. In self-imposed exile, dragon Emile runs across the Fold between his dimension and Sunny's and right into Sunny's arms. Centuries out of touch with human culture, bright, beautiful Emile incinerates any hope Sunny had for an ordinary existence. With dryads and water sprites coming to life all around them, Sunny can't deny the magic Emile brings to his life or his heart. But that same magic leads the unrelenting dragon who would keep Emile captive right to them. To save his love, Sunny will have to reach deep and find some magic of his own.

Vladimir (Russian Dragon Heat 1) Carole Mortimer, 2020-11-27 The Russian Dragon series you've all been asking for! VLADIMIR, Russian Dragon Heat 1, is the first book in the much-requested Russian Dragon Heat series. It has passion and excitement.

with visits from several characters from my previous dragon shifter series Dragon Hearts At a thousand years old Vladimir is the eldest of the seven remaining dragon shifter Romanov brothers Having lived all those years with the hope of one day meeting his fated mate he can't believe it when he realises his mate is the female dragon hunter who tried to kill his brother Vaughn Not only can't Vladimir believe it he fights against accepting it Tanya holds all of the Romanov brothers responsible not only for the deaths of her parents ten years ago but because she and her brother were afterwards sent to one of the notorious Russian orphanages to survive as best they could After months and years of planning Tanya is devastated when her attempt to kill one of the fierce Romanov dragon shifter brothers is unsuccessful Instead she once again finds herself incarcerated against her will this time at the Romanovs winter palace as she waits to learn her fate Tanya knows nothing of a dragon shifter's fated mate but she certainly has no intention of ever becoming that to the arrogant and cold Vladimir Romanov

How We Became Human , Julio Moreno,2014-03-06 How We Became Human A Challenge to Psychoanalysis tackles the question of what distinguishes human beings from other animals By interweaving psychoanalysis biology physics anthropology and philosophy Julio Moreno advances a novel thesis human beings are faulty animals in their understanding of the world around them This quality renders humans capable of connecting with inconsistencies those events or phenomena that their logic cannot understand The ability to go beyond consistency is humans distinctive trait It is the source of their creativity and of their ability to modify the environment they inhabit On the basis of this connective associative interplay Moreno proposes a new approach to the links human beings create amongst themselves and with the world around them This theory focuses on a key question What is the difference between human beings and the other animals From this perspective Moreno seeks to reformulate many of the classic psychoanalytic psychological and anthropological postulates on childhood links and psychic change

The Performance of Viking Identity in Museums Guðrún D. Whitehead,2024-08-12 The Performance of Viking Identity in Museums explores the representations and uses of Vikings in museums across Iceland British Isles and Norway Drawing on theories from history philosophy museology and sociology the book analyses how the Viking myth is used by visitors to make sense of present day society culture and politics and the role of museums in this meaning making process Demonstrating that the Viking myth is present in collective memory and plays an important role in the construction and modification of collective national and personal identities the book analyses this process through the framework of museums and their visitors Identifying museums as places where heritage identity and social norms are affirmed and reflected upon Whitehead demonstrates that all countries use their Viking heritage to define their identity on a local and international level through tourist attractions such as museums and other Viking related monuments and merchandise Providing readers with an insight into Vikings and their social relevance today The Performance of Viking Identity in Museums will be of great interest to

Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives Sarit Ashkenazi,Orly Rubinsten,Bert De Smedt,2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on

the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and atypical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
