Control of the Cardiovascular and Respiratory Systems in Health and Disease C. Tissa Kappagoda, Marc P.

Kaufman, 2012-12-06 On April 8-9 1994 a symposium entitled Control of the Cardiovascular and Respiratory Systems in Health and Disease was held at the University of California Davis Medical Center in Sacramento. The purpose of this symposium was to honor the careers of Professors Hazel M and John C G Coleridge. Participants in this symposium came from throughout the world. Their attendance at the symposium was a symbol of great respect and affection for the honorees. The Professors Coleridge have made many important contributions to the scientific literature concerning neural control of the cardiovascular and respiratory systems. In addition they have made remarkable contributions to the lives of other scientists working in this field of investigation. Some of us have known them as mentors, counselors, friends, and supervisors; others have known them as co-investigators. Most importantly, all of us have known them as friends. This book, which contains the proceedings of the symposium, is dedicated to Hazel and John Coleridge. C. T. Kappagoda, M. P. Kaufman v

Black, Jasper Brener, Leo V. DiCara, 2017-11-13 The literature relating to the learned control of autonomic processes, especially cardiovascular processes, demonstrating that the activities of visceral response systems may be modified by operant reinforcement and biofeedback procedures, has grown exponentially. This research seems to show behavioral properties in the cardiovascular system that were previously believed to be exclusive attributes of the somatic response systems. The implications of this for possible therapeutic use have received widespread publicity. Questions remained unanswered about the nature of voluntary control and the conditions necessary for establishing it. The reciprocal effects of conditioned changes in cardiovascular and psychological or behavioral functioning, the use of cardiovascular events to index behavioral states, and the principles and techniques whereby operant conditioning of the cardiovascular system can be clinically applied. **Biology as Inquiry** Burton Elmer Voss, Stanley Barber Brown, 1968 Child Development Abstracts and Bibliography, 1928
