Big data does not comprise just raw information; it also includes the information generated and accumulated by the data scientists in the business firms. Hence, there is no doubt, adding the right mix of data to the already available data can lead to the business success. Thus, this is the reason firms are keen to bring in big data into their business and use it for their business success.

Abstract: The purpose of this study was to determine the effect of a 12-week, low-intensity, low-impact, and low-volume exercise program on the physical fitness of sedentary, middle-aged women. The program was designed to be a safe and effective means of increasing physical activity in sedentary women. The program consisted of three sessions per week, each lasting 30 minutes. The sessions included a warm-up, a low-impact aerobic workout, and a low-intensity strength training routine. The results of the study showed that the program had a positive effect on the physical fitness of the women. There was a significant increase in heart rate, blood pressure, and body mass index (BMI) over the 12-week period. The program was well-tolerated by the women, and they reported a decrease in fatigue and an increase in energy levels. The findings of this study suggest that a low-intensity, low-impact, and low-volume exercise program can be an effective means of improving physical fitness in sedentary, middle-aged women.
