

Part I:

1. What is "inertia"?
 - a. An object's resistance to changes in its motion.
2. A truck is traveling to the right and is carrying a ladder on its roof, which is not securely attached. When the truck slams on its brakes, do you think the ladder will:
 - a. Slide forwards off the front of the truck
3. Watch the Truck and Ladder animation by clicking this link: <http://www.physicsclassroom.com/mmedia/newtlaws/ll.cfm>
Describe and explain the motion of the ladder using Physics terms.
 - a. The truck and ladder are both moving together at the same speed. When the truck suddenly stops, the ladder keeps moving due to its inertia (resistance to changes in its motion). If it is not tied to the truck securely, the ladder will keep moving when the truck stops.
4. An airplane is flying eastward at 200 m/s when it drops a package out of the bottom. Do you think the package will land:
 - a. directly beneath the airplane
5. Watch the Airplane Animation by clicking this link: <http://www.physicsclassroom.com/mmedia/vectors/bap.cfm>
Explain why the package landed where it did using the concept of inertia.
 - a. The package has inertia (resistance to changes in its motion). The package was moving at the same speed as the airplane. Once the airplane releases the package, it will keep moving with the same speed as the airplane. Therefore (in the absence of air resistance), the package will land directly beneath the airplane.
6. Start by clicking this link: <http://www.physics.umn.edu/outreach/pforce/circus/> and then select and watch the "Giant Puffer" video. Describe how the teacher demonstrated that even air has inertia.
 - a. When the air is pushed inside the Puffer, it is projected outward. The smoke shows that the air keeps moving forward after being set in motion.
7. If you instead filled the Giant Puffer with water instead of air, the water would not fly out nearly as far as the air did. Use Physics terms to explain why this is true.
 - a. Water has more mass than air and thus has more inertia. The water will resist changes in its motion more and thus will have a smaller velocity when it exits the puffer. The effects of gravity (an external force) will thus also be more obvious for water due to its increased mass.
