In today s evolving networking arena the difficult task in writing a book is to present the information in a timely manner Although I have tried to present the theory and practice of the technology to date still there may be some facts that are overlooked This is due to the time it takes from writing the manuscript to its publication However I do firmly believe the contents of this book are enormous and careful readers will be able to apply them to their everyday work My primary objective is to share with the readership my learning and experience and facilitate a thorough understanding of the most commonly used internetworking technology that emphasizes practice rather than theory Therefore the text can be considered as tutorial in nature Following recent trends data and telecom technologies have been integrated into one complex infrastructure of unified transport means fueled by the merger mania of data/telecom giants Such a unified information transport mechanism has identified the reliable transfer of information as an important factor for internet working As a result a major part of the industry has embraced IP Internet protocol as the primary transport means for

information interchange With the new advent and complexity of integrated networking practitioners and users are more overwhelmed than ever before Hence in this book I have followed the industry trend in LAN local area network technologies and ended with a practical guide to a unified solution **How to Build a Radio Station** Dave Walters,2006-10-01 A
