Transcending the Speed of Light Marc Seifer, 2008-08-13 A study of the new scientific understanding of consciousness and the mind as a fifth dimension of reality Introduces the existence of a fifth dimension one of mind an inner or hyperspace where time is transcended Shows how the barrier of the speed of light is actually a gateway demarking the fifth dimension Since the introduction of Descartes dualism in the seventeenth century the mind and the physical world have been viewed as disconnected entities Yet qualities of mind such as awareness purposeful action organization design and even decision making are present within the structure of matter and within the dimensions of space and time The space time continuum of scientists generally ignores the realm of the mind though phenomena such as imaginary numbers used by Einstein to combine space with time are concepts that only exist in the mind Marc Seifer contends that the inadequacy of four

dimensional models to account for our experience of mental phenomena points to the consciousness of the mind as a higher organizing principle a fifth dimension where thoughts are as real and quantifiable as our familiar physical world He shows that because thought enables us to move backward and forward through time reflecting on the past and making plans for the future this fifth dimension of mind breaks the laws of relativity thereby transcending the speed of light His extensive study of this fifth dimension ranges from relativity and ether theory to precognition telepathy and synchronicity all from the perspective of the conscious universe **Resources in Education** ,2001-10 **Unlocking Potential** Tamra
