

Section 8.0 – Exploring the Logarithmic Function

Logarithmic Function:

The inverse of the exponential function $y = a^x$ is the function with exponential equation $x = a^y$. We write y as a function of x using the logarithmic form of this equation, $y = \log_a(x)$. As with the exponential function, $a > 0$, and $a \neq 1$.

The general shape of the graph of the logarithmic function depends on the value of the base.

When $a > 1$, the exponential function is an increasing function, and the logarithmic function is also an increasing function.

When $0 < a < 1$, the exponential function is a decreasing function and the logarithmic function is also a decreasing function.

The y -axis is the vertical asymptote for the logarithmic function. The x -axis is the horizontal asymptote for the exponential function.

The x -intercept of the logarithmic function is 1, while the y -intercept of the exponential function is 1.

The domain of the logarithmic function is $D: \{x \in \mathbb{R} \mid x > 0\}$, since the range of the exponential function is $R: \{y \in \mathbb{R} \mid y > 0\}$

The range of the logarithmic function is $R: \{y \in \mathbb{R}\}$, since the domain of the exponential function is $D: \{x \in \mathbb{R}\}$.
