

Testing Ideal Weinberg Populations Introduction:

The Hardy Weinberg model allows us to compare genetic structures from one population to the next generations of that population. It calculates changes in allele frequencies, and provides evidence for the occurrence of evolution in a population. In order for a population to be at equilibrium 5 conditions must be met. To reach equilibrium there must be a large population to study from. No migrations can occur because we're focusing on one population over time. The population must remain within themselves so no mutation, random mating, and lastly no natural selection can occur. All these conditions must be met to study the evolution of a given population. In the first lab that we did, most people will be able to taste the paper. In case one our initial hypothesis is that The brown in each generation will increase in population as the gold in each generation decreases in population. In case study two we assume that the homozygous recessive individuals won't survive. But the heterozygous and homozygous dominant would always survive.

Materials and procedures:

- 25 brown beads
- 25 white beads
- PTC Papers
- Paper Bags

For the PTC paper lab we began by using the PTC taste-test papers provided and pressing it to the tip of our tongue. PTC tasters will sense a bitter taste while nontasters sense nothing. We then calculated the frequency of tasters by dividing the number of tasters in the class with the total amount of students in the class. As for calculating the frequency of nontasters, you can do so by dividing the number of nontasters to the total number of students. We then used the Hardy-Weinberg equation to determine the frequencies of the two alleles. The frequency of q can be found by taking the square root of q^2 . After q was calculated, we were able to determine p because $1-q=p$. Then we calculated values of p and q for the North American Population. After determining these numbers we later then recorded the values onto the table.

First what we had to do was make sure we had a "population" of 50 beads. The population consisted of 25 being white and the remaining 25 brown. We needed to record each generation. We chosen at random 5 beads that were our "dead" population and placed them into a bag that was labeled R.I.P. After those were taken out, we were given 5 more beads to be placed

Mark Dale, Wendy S. Becker, 2014-09-26 New technologies including DNA and digital databases that can compare known and questioned exemplars have transformed forensic science and greatly impacted the investigative process They have also made the work more complicated Obtaining proper resources to provide quality and timely forensic services is frequently a challenge for forensic managers who are often promoted from casework duties and must now learn a whole new set of leadership skills The interdisciplinary and scientific nature of laboratories requires strong leadership ability to manage complex issues often in adversarial settings *Forensic Laboratory Management Applying Business Principles* provides laboratory managers with business tools that apply the best science to the best evidence in a manner that increases the efficiency and effectiveness of their management decision making The authors present a performance model with seven recommendations to implement illustrating how forensic managers can serve as leaders and strategically improve the operation and management in scientific laboratories Topics include Key business metrics and cost benefit analyses Ethical lapses why they occur possible motives and how problems can be prevented Forensic training education and institutes ISO IEC 17025 accreditation implementation The book includes case studies simulating a working laboratory in which readers can apply business tools with actual data reinforcing discussion concepts Each chapter also includes a brief review of current literature of the best management theories and practice The downloadable resources supply two mock trial transcripts and associated case files along with PowerPoint slides from Dr George Carmody s workshop on Forensic DNA Statistics and Dr Doug Lucas s presentation on

A Hands-On Introduction to Forensic Science Mark Okuda, Frank H. Stephenson, PhD., 2014-10-17 One failing of many forensic science textbooks is the isolation of chapters into compartmentalized units. This format prevents students from understanding the connection between material learned in previous chapters with that of the current chapter. Using a unique format, *A Hands-On Introduction to Forensic Science: Cracking the Case* approaches the topic of forensic science from a real-life perspective in a way that these vital connections are encouraged and established. The book utilizes an ongoing fictional narrative throughout, entertaining students as it provides hands-on learning in order to crack the case. As two investigators try to solve a missing persons case, each succeeding chapter reveals new characters, new information, and new physical evidence to be processed. A full range of topics are covered, including processing the crime scene, lifting prints, trace and blood evidence, DNA and mtDNA sequencing, ballistics, skeletal remains, and court testimony. Following the storyline, students are introduced to the appropriate science necessary to process the physical evidence, including math, physics, chemistry, and biology. The final element of each chapter includes a series of cost-effective, field-tested lab activities that train students in

Romano, Alistair Dove, Heather Jane Koldewey, 2025-02-13 As zoological organizations evolve in the twenty first century to address the biodiversity extinction crisis and proactively demonstrate relevance in a changing public opinion landscape their conservation science portfolios continue to expand Public zoos and aquariums address these issues directly by conducting both ex and in situ research designed to advance our understanding of species while also detecting diagnosing and halting population declines in the wild In particular the distinct nature of zoological organizations uniquely positions

them to make significant contributions to marine science. The ability to care for and access a diverse suite of marine species provides the opportunity to understand their behavior, biology, physiology, which can inform ex situ investigations. Moreover, the broad skillsets of staff facilitate extensive collaborative research opportunities. These ongoing contributions to marine science have remained relatively underappreciated by others outside the community. Here we intend to raise awareness about these contributions and initiate further collaborative research opportunities. Building on an increasing body of literature, our goal is to curate a diverse portfolio of research that represents the contributions of zoos and aquariums to the field of marine science and to highlight the novel qualities of these conservation-based organizations. These can broadly be divided into four main categories: i) Infrastructure: extensive capacity to care for a wide variety of animals; extensive veterinarian hospital spaces and equipment; advanced water quality and microbiology labs; research vessels; and the generation of funds through ticket sales and contributions. ii) Animal care expertise in maintaining animals under professional human care, including breeding; diverse veterinary expertise; development of species-specific research techniques relevant to the study of wild populations. iii) Dedicated research programs; personnel typically focused on wild populations, ecosystems, and. iv) Education and social science policy and advocacy; education and outreach; large audiences to educate, engage on conservation issues, and inspiring the next generation of conservation champions, biologists. This will serve to further bring zoos and aquariums to the forefront as potential collaborators for other marine scientists conducting both in situ and ex situ research, particularly those studies that would benefit from the unique opportunities and rare and endangered species. Zoos and aquariums provide *Biology*, 1998
