Contemporary Issues in Mathematics Education Estela A. Gavosto, Steven G. Krantz, William McCallum, 1999-06-13 This volume presents a serious discussion of educational issues with representations of opposing ideas *Computing Center Memo* University of Michigan Computing Center, 1969 $\mathbb{G}\mathbb{S}$ -Global Homotopy Theory and Algebraic $\mathbb{K}\mathbb{S}$ -Theory Tobias Lenz, 2025-02-25 View the abstract **Calabi-Yau Varieties: Arithmetic, Geometry and Physics** Radu Laza, Matthias Schütt, Noriko Yui, 2015-08-27 This volume presents a lively introduction to the rapidly developing and vast research areas surrounding Calabi Yau varieties and string theory With its coverage of the various perspectives of a wide area of topics such as Hodge theory Gross Siebert program moduli problems toric approach and arithmetic aspects the book gives a comprehensive overview of the current streams of mathematical research in the area The contributions in this book are based on lectures that took place during workshops with the following thematic titles Modular Forms Around String Theory Enumerative Geometry and Calabi Yau Varieties Physics Around Mirror Symmetry Hodge Theory in String Theory The book is ideal for graduate students and researchers learning about Calabi Yau varieties as well as physics students and string theorists who wish to learn the mathematics behind these varieties *Perverse Sheaves and Applications to Representation Theory* Pramod N. Achar, 2021-09-27 Since its inception around 1980 the theory of perverse sheaves has been a vital tool of fundamental importance in geometric representation theory This book which aims to make this theory accessible to students and researchers is divided into two parts The first six chapters give a comprehensive account of constructible and perverse sheaves on complex algebraic varieties including such topics as Artin's vanishing theorem smooth descent and the nearby cycles functor This part of the book also has a chapter on the equivariant derived category and brief surveys of side topics including tale and adic sheaves D modules and algebraic stacks The last four chapters of the book show how to put this machinery to work in the context of selected topics in geometric representation theory Kazhdan Lusztig theory Springer theory the geometric Satake equivalence and canonical bases for quantum groups Recent developments such as the p canonical basis are also discussed The book has more than 250 exercises many of which focus on explicit calculations with concrete examples It also features a 4 page Quick Reference that summarizes the most commonly used facts for computations similar to a table of integrals in a calculus textbook *Open Problems in Mathematics* John Forbes Nash, Jr., Michael Th. Rassias, 2016-07-05 The goal in putting together this unique compilation was to present the current status of the solutions to some of the most essential open problems in pure and applied mathematics Emphasis is also given to problems in interdisciplinary research for which mathematics plays a key role This volume comprises highly selected contributions by some of the most eminent mathematicians in the international mathematical community on longstanding problems in very active domains of mathematical research A joint preface by the two volume editors is followed by a personal farewell to John F Nash Jr written by Michael Th Rassias An introduction by Mikhail Gromov highlights some of Nash's

legendary mathematical achievements The treatment in this book includes open problems in the following fields algebraic geometry number theory analysis discrete mathematics PDEs differential geometry topology K theory game theory fluid mechanics dynamical systems and ergodic theory cryptography theoretical computer science and more Extensive discussions surrounding the progress made for each problem are designed to reach a wide community of readers from graduate students and established research mathematicians to physicists computer scientists economists and research scientists who are looking to develop essential and modern new methods and theories to solve a variety of open problems 2-Dimensional

Categories Niles Johnson,Donald Yau,2021 Category theory emerged in the 1940s in the work of Samuel Eilenberg and Saunders Mac Lane It describes relationships between mathematical structures Outside of pure mathematics category theory is an important tool in physics computer science linguistics and a quickly growing list of other sciences This book is about 2 dimensional categories which add an extra dimension of richness and complexity to category theory 2 Dimensional

Categories is an introduction to 2 categories and bicategories assuming only the most elementary aspects of category theory A review of basic category theory is followed by a systematic discussion of 2 bicategories pasting diagrams lax functors 2 bilimits the Duskin nerve 2 nerve internal adjunctions monads in bicategories 2 monads biequivalences the Bicategorical Yoneda Lemma and the Coherence Theorem for bicategories Grothendieck fibrations and the Grothendieck construction are discussed next followed by tricategories monoidal bicategories the Gray tensor product and double categories Completely detailed proofs of several fundamental but hard to find results are presented for the first time With exercises and plenty of motivation and explanation this book is useful for both beginners and experts **Group Actions and Equivariant**

Cohomology Loring W. Tu,2024-11-26 This volume contains the proceedings of the virtual AMS Special Session on Equivariant Cohomology held March 19 20 2022 Equivariant topology is the algebraic topology of spaces with symmetries At the meeting equivariant cohomology was broadly interpreted to include related topics in equivariant topology and geometry such as Bredon cohomology equivariant cobordism GKM Goresky Kottwitz and MacPherson theory equivariant K theory symplectic geometry and equivariant Schubert calculus This volume offers a view of the exciting progress made in these fields in the last twenty years Several of the articles are surveys suitable for a general audience of topologists and geometers To be broadly accessible all the authors were instructed to make their presentations somewhat expository This collection should be of interest and useful to graduate students and researchers alike CRC Concise Encyclopedia of Mathematics

Eric W. Weisstein,2002-12-12 Upon publication the first edition of the CRC Concise Encyclopedia of Mathematics received overwhelming accolades for its unparalleled scope readability and utility It soon took its place among the top selling books in the history of Chapman Hall CRC and its popularity continues unabated Yet also unabated has been the d **Vertex**

Operator Algebras, Number Theory and Related Topics Matthew Krauel,Michael Tuite,Gaywalee Yamskulna,2020-07-13 This volume contains the proceedings of the International Conference on Vertex Operator Algebras Number Theory and

Related Topics held from June 11-15 2018 at California State University Sacramento California The mathematics of vertex operator algebras, vector valued modular forms and finite group theory continues to provide a rich and vibrant landscape in mathematics and physics The resurgence of moonshine related to the Mathieu group and other groups, the increasing role of algebraic geometry and the development of irrational vertex operator algebras are just a few of the exciting and active areas at present The proceedings center around active research on vertex operator algebras and vector valued modular forms and offer original contributions to the areas of vertex algebras and number theory surveys on some of the most important topics relevant to these fields introductions to new fields related to these and open problems from some of the leaders in these areas

The Mathematics of Preference, Choice and Order Steven Brams, William V. Gehrlein, Fred S.

Roberts, 2009-02-11 Peter Fishburn has had a splendidly productive career that led to path breaking contributions in a remarkable variety of areas of research His contributions have been published in a vast literature ranging through journals of social choice and welfare, decision theory, operations research, economic theory, political science, mathematical psychology and discrete mathematics This work was done both on an individual basis and with a very long list of coauthors The contributions that Fishburn made can roughly be divided into three major topical areas and contributions to each of these areas are identified by sections of this monograph Section 1 deals with topics that are included in the general areas of utility, preference, individual choice, subjective probability and measurement theory Section 2 covers social choice theory, voting models and social welfare Section 3 deals with more purely mathematical topics that are related to combinatorics, graph theory and ordered sets The common theme of Fishburn's contributions to all of these areas is his ability to bring rigorous mathematical analysis to bear on a wide range of difficult problems

Ring Theory and Its Applications Dinh Van Huynh, S. K. Jain, Sergio R.

López-Permouth, S. Tariq Rizvi, Cosmin S. Roman, 2014-02-21 This volume contains the proceedings of the Ring Theory Session in honor of T. Y. Lam's 70th birthday at the 31st Ohio State Denison Mathematics Conference held from May 25-27 2012 at The Ohio State University Columbus Ohio Included are expository articles and research papers covering topics such as cyclically presented modules Eggert's conjecture, the Mittag-Leffler conditions, clean rings, McCoy rings, QF rings, projective and injective modules, Baer modules and Leavitt path algebras Graduate students and researchers in many areas of algebra will find this volume valuable as the papers point out many directions for future work in particular several articles contain explicit lists of open questions

Mathematical Theory of Scattering Resonances Semyon Dyatlov, Maciej

Zworski, 2019-09-10 Scattering resonances generalize bound states, eigenvalues for systems in which energy can scatter to infinity A typical resonance has a rate of oscillation just as a bound state does and a rate of decay Although the notion is intrinsically dynamical, an elegant mathematical formulation comes from considering meromorphic continuations of Green's functions The poles of these meromorphic continuations capture physical information by identifying the rate of oscillation with the real part of a pole and the rate of decay with its imaginary part An example from mathematics is given by the zeros

of the Riemann zeta function they are essentially the resonances of the Laplacian on the modular surface The Riemann hypothesis then states that the decay rates for the modular surface are all either or An example from physics is given by quasi normal modes of black holes which appear in long time asymptotics of gravitational waves This book concentrates mostly on the simplest case of scattering by compactly supported potentials but provides pointers to modern literature where more general cases are studied It also presents a recent approach to the study of resonances on asymptotically hyperbolic manifolds The last two chapters are devoted to semiclassical methods in the study of resonances Algebraic Groups: Structure and Actions Mahir Bilén Can, 2017-04-06 This volume contains the proceedings of the 2015 Clifford Lectures on

Algebraic Groups Structures and Actions held from March 2 5 2015 at Tulane University New Orleans Louisiana This volume consists of six articles on algebraic groups including an enhanced exposition of the classical results of Chevalley and Rosenlicht on the structure of algebraic groups an enhanced survey of the recently developed theory of pseudo reductive groups and an exposition of the recently developed operational theory for singular varieties In addition there are three research articles containing previously unpublished foundational results on birational automorphism groups of algebraic varieties solution of Hermite Joubert problem over closed fields and cohomological invariants and applications to classifying spaces The old and new results presented in these articles will hopefully become cornerstones for the future development of the theory of algebraic groups and applications Graduate students and researchers working in the fields of algebraic geometry number theory and representation theory will benefit from this unique and broad compilation of fundamental results on algebraic group theory **Needle Decompositions in Riemannian Geometry** Bo'az Klartag, 2017-09-25 The

localization technique from convex geometry is generalized to the setting of Riemannian manifolds whose Ricci curvature is bounded from below In a nutshell the author's method is based on the following observation When the Ricci curvature is non negative log concave measures are obtained when conditioning the Riemannian volume measure with respect to a geodesic foliation that is orthogonal to the level sets of a Lipschitz function The Monge mass transfer problem plays an important role in the author's analysis **The Mathematics Student**, 1968 **Computational Methods in Optimization** E.

Wang, Katsushi Inoue, 1992-12-02 This volume contains the papers selected for presentation at the Second International Conference on Parallel Image Analysis ICPIA 92 held in Ube Japan December 21 23 1992 The conference topics are data structures parallel algorithms and architectures neural networks computational vision syntactic generation and recognition and multidimensional models The first meeting with these topics was the International Colloquium on Parallel Image Processing which took place in Paris in June 1991 The aim of the meetings is to bring together specialists from various countries who are interested in the topics and to

stimulate theoretical and practical research in the field of parallel image processing and analysis. The volume contains three invited papers, a summary of a tutorial lecture, and twenty selected and refereed communications.
