

# Miracle cure kills fifth patient

By The Associated Press

A fifth volunteer died Tuesday from an experimental drug touted as a miracle cure for hepatitis B, beyond medical rescue even as scientists unraveled the mystery of what went gravely wrong in a clinical trial.

Agonizingly, the first clue was in plain sight a year ago, but researchers at the National Institutes of Health didn't know enough about how the drug worked to recognize what it meant, the study's lead scientist says.

"Something terrible happened and we missed it," Dr. Jay Hoofnagle said in an emotional

interview describing the horror of realizing the drug was killing people months after they stopped taking it.

"The dreadful thing [is] waiting to see what will happen," he said, his voice trembling, before learning of the most recent death. "I just hope we're over the worst."

The drug Fialuridine, or FLAU, had shown great promise for fighting the hepatitis B virus, which can cause deadly cirrhosis and liver cancer. When dogs passed toxicity tests unharmed, the Food and Drug Administration approved FLAU for human trials.

Too late, scientists would discover that in humans, FLAU stealthily attacks the very building blocks of cells in livers, kidneys and nerves.

Five people treated with FLAU have died of liver and kidney failure, despite liver transplants for three of them. On Tuesday, a 37-year-old woman succumbed after two months in critical condition and two liver transplants at the University of Virginia Medical Center. One volunteer remains in serious condition there, and another is recovering from an Aug. 4 transplant at Emory University Hospital in Atlanta.
