In 2015, scientists in the United Kingdom were able to use gene therapy to treat a one-year old child's leukaemia, improving her quality of life.
- c. Scientists have long searched for a technique that effectively converts types AB, A, and B blood into type O, the "universal donor," and thanks to a gut bacteria, the search might be over. Researchers from the University of British Columbia reported that a newly-discovered enzyme from the human gut can convert types A and B blood into type O blood by much as 30 times more efficiently than previously studied enzymes. Clinical trials are needed to determine the safety and efficacy of the technique in humans, but researchers are optimistic that this novel approach could greatly reduce chronic blood-supply shortages.
- d. Mila Makovec → suffered from devastating disease (neurodegenerative condition called Batten disease) as a result of unique genetic mutation and her case made headlines in the New England Journal of Medicine in Oct 2019, prompting **Boston Children's Hospital scientist Timothy Yu** to create the drug 'milasen' (named after her) in only 10 months.
