

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

[1] Circles are females and squares are males.

[2] A shaded circle or square indicates that a person has the trait.

The pedigree seen below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person 1 - 15. Then answer the questions below the table.

What do you know about the genotype of the mother of 1?

These people (1) had a color blind son (2). His dad is a carrier, but color blind. When he is mother knows the mother is not shaded she must be a carrier.

Number 6 is color blind just like her father. Where could she get her allele for color blindness?

She inherited her allele for color blindness from her mother. Must have been a carrier. If color blind, from her father.

Number numbers 11 and 12 were color blind. How did they have a color blind son (13)?

Both mother and father are carriers for color blindness.

What must be the genotype of the parents of a color blind daughter? Explain.

To have a color blind daughter, she must have the recessive allele from each parent. Her father must be $X^c Y$ and mother must have to be $X^c X^c$.

If mother 11 has a normal son, what is the probability that their son will be color blind?

$X^N X^c \times X^c Y \rightarrow$ all of their sons will be color blind.
 (50%) (normal male)
