5.3 Congruent Triangles

Mr. X is an insurance person. He takes pleasure in drawing a triangle and seeing if another person can recreate his drawing from piecemeal information. For each example, draw a diagram to support your answer. (Note: Begin each exercise by drawing a triangle. Measure the parts of your triangle that Mr. X gives you and try to draw a different triangle with those parts. If the two triangles are congruent, you draw Mr. X's triangle.)

- If Mr. X gives you the measures of the sides of a triangle, could you be sure you would draw Mr. X's triangle?

Yes, possible answer:

- If Mr. X gives you the measures of the angles of a triangle, could you be sure you would draw Mr. X's triangle?

No, possible answer:

- If Mr. X gives you the measures of one angle and of both sides of that angle, could you be sure you would draw Mr. X's triangle?

Yes, possible answer:

- If Mr. X gives you the measures of one side and both angles that share that side, could you be sure you would draw Mr. X's triangle?

Yes, possible answer:

- If Mr. X gives you the measures of one angle, one adjacent side, and the side opposite the angle, could you be sure you would draw Mr. X's triangle? (Hint: Start with an angle less than 90° and a long adjacent side.)

5.3 Congruent Triangles

Triangles are congruent if they have the same size and shape. Their corresponding parts, the angles and sides that are in the same position, are congruent.

Corresponding Parts	
Congruent Angles	Congruent Sides
$\angle A \cong \angle D$	$\overline{AB} \cong \overline{DE}$
$\angle B \cong \angle E$	$\overline{BC} \cong \overline{EF}$
$\angle C \cong \angle F$	$\overline{AC} \cong \overline{DF}$

To identify corresponding parts of congruent triangles, look at the order of the vertices in the congruence statement such as $\triangle ABC \cong \triangle DEF$.

Given: $\triangle XYZ \cong \triangle MPO$. Identify the congruent corresponding parts.

$$\angle X \cong \angle M$$

$$\angle Y \cong \angle P$$

$$\angle Z \cong \angle O$$

Fundamentals of the Finite Element Method for Heat and Fluid Flow Roland W. Lewis, Perumal Nithiarasu, Kankanhalli N. Seetharamu, 2008-02-07 Heat transfer is the area of engineering science which describes the energy transport between material bodies due to a difference in temperature The three different modes of heat transport are conduction convection and radiation In most problems these three modes exist simultaneously However the significance of these modes depends on the problems studied and often insignificant modes are neglected Very often books published on Computational Fluid Dynamics using the Finite Element Method give very little or no significance to thermal or heat transfer problems From the research point of view it is important to explain the handling of various types of heat transfer problems with different types of complex boundary conditions Problems with slow fluid motion and heat transfer can

be difficult problems to handle Therefore the complexity of combined fluid flow and heat transfer problems should not be underestimated and should be dealt with carefully This book Is ideal for teaching senior undergraduates the fundamentals of how to use the Finite Element Method to solve heat transfer and fluid dynamics problems Explains how to solve various heat transfer problems with different types of boundary conditions Uses recent computational methods and codes to handle complex fluid motion and heat transfer problems Includes a large number of examples and exercises on heat transfer problems In an era of parallel computing computational efficiency and easy to handle codes play a major part Bearing all these points in mind the topics covered on combined flow and heat transfer in this book will be an asset for practising engineers and postgraduate students Other topics of interest for the heat transfer community such as heat exchangers and radiation heat transfer are also included
