Igneous rocks are created from magma, which is _____ rock. The Latin word for fire is 'ignis', which is where the word _____ gets its name. Igneous rocks are formed in two different ways; under the Earth's surface or above the Earth through volcanic _____. There are many types of igneous rock; the most common are basalt, andesite, rhyolite, pumice, _____ and obsidian.

Different types of volcanoes create different kinds of rock. This is because each type of volcano erupts differently.

Shield volcanoes usually have very _____ magma chambers under the Earth which helps explain how very hot and runny the lava is during a volcanic eruption. The rock that basalt is formed from _____ volcano eruptions. Basalt has a dark, grainy look and is quite heavy to hold.

Cone volcanoes, sometimes called stratovolcanoes, have a magma _____ that is a little closer to the Earth's surface than a shield volcano. The reason for this is that erupt from cone volcanoes is more viscous or sticky, but it is still hot! The rock that forms from the melted _____ holds a little more gas inside when it cools, causing the rock to be less dense or buoy. Andesite and granite are types of igneous rock that come from a _____ volcano.

Cinder cones are cinder cones. Caldres _____ have a magma chamber which is closer to the Earth's surface. This causes the lava that erupts to be viscous or sticky as it is cooled. The substance of the lava from volcanoes _____ made by each volcano. Igneous rocks to be formed. Rhyolite and granite are common types of rock that come from _____ volcanoes.

Not all igneous _____ are formed by volcanic eruptions. Sometimes the magma under the Earth's surface is squeezed out (flows), or cracks, in the Earth. The magma slowly cools and hardens into rock. As it hardens, it creates _____ crystals. Granite is an igneous rock that has been made this way.

To make sure an igneous rock is formed, for many years people have found important uses for them to help us.
