La Science En Jeu:

La science en jeu Jean-Michel Besnier, 2010 Nagu re souveraine la science est aujourd'hui en question cible de critiques d'ordre philosophique ou politique tenue pour responsable de maintes dérives du monde actuel quand elle n'est pas victime de l'ignorance et du désintérêt. L'illusion même d'une science unitaire omnisciente et transcendante de la mathesis universalis chez Leibniz s'est dissipée y compris l'intérieur d'un champ de connaissances dont aucun spécialiste ne maîtrise la totalité. Signe des temps le beau nom de savant de qui goûte la saveur du savoir a cédé la place au sec scientifique l'invent anonyme d'un complexe réseau. Et pourtant la science l'univers de techniques innovantes d'évaluations quantitatives d'expertises aiguës qu'elle ne cesse de créer reste autant que l'antique fondement religieux le socle idéal de nos sociétés celui qui façonne nos modes de vie et nos schémas mentaux. Au point qu'une nouvelle métaphysique de la technoscience triomphante promet tel le Pantagruelion rabelaisien de tout expliquer et de tout résoudre. Qu'est-ce que la science. Que peut-elle. Que vaut-elle. Les questions de Kant restent celles que le public spontanément pose une recherche aussi profondément engagée dans le devenir de nos sociétés. Comment en comprendre les origines et le développement l'essence paradoxale l'extrême complexité qui vire désormais à l'incommunicabilité et donne prise à la confusion. Comment en apprécier les résultats tout en mesurant les limites et les risques. Comment viter le relativisme des sabus ou le rejet pur et simple. Comment sortir du flou des approximations et des idées toutes faites. Les réponses ce faisceau de questions ne peuvent être que plurielles. Et ludiques la réflexion est un jeu de miroirs où les divers points de vue se concentrent et se clarifient de prismes où ils se diffractent. Aussi deux chercheurs un biologiste et un physicien et deux philosophes se livrent-ils au libre jeu des changes entre les perspectives qu'ils dessinent et des rebonds sur les questions que leur posent les représentants non spécialistes de la société civile. Il en ressort toute une série d'aperçus concrets aussi excitants pour l'esprit qu'essentiels la compréhension de ce qui se joue sur le boson de Higgs les théories physiques et la prévision par le calcul de réactions vérifier par l'expérimentation sur le traitement individuel de l'atome et l'engouement pour les nanotechnologies sur le créationnisme niant l'évolution sur le transhumanisme promettant de remodeler l'homme. Illustrer ainsi la grandeur de l'esprit scientifique et la conscience honnête de ses limites comme de son essentiel inachèvement en est la meilleure défense c'est du même coup l'appel à une authentique culture ouverte à la complexité soucieuse des implications désireuses de l'expansion des choses infinies.

La science en ballon Wilfrid Fonvielle, 1869 **Process Engineering Renewal 3** Éric Schaer, Jean-Claude André, 2020-07-17 Process engineering emerged at the beginning of the 20th Century and has become an essential scientific discipline for the matter and energy processing industries. Its success is incontrovertible with the exponential increase in techniques and innovations. Rapid advances in new technologies such as artificial intelligence as well as current societal needs sustainable development climate change renewable energy the environment are developments that must be taken into account in industrial renewal. Process Engineering Renewal 3 presents a prospective analysis that demonstrates the significant disruptions linked to sustainable development global

warming etc These constraints may trigger changes in the social regulation system which in turn applies pressure on actors of process engineering to evolve and adapt to these developments

Les ancrages nationaux de la science mondiale. XVIIIe-XXIe siècles Mina Kleiche-Dray, Collectif, 2018 Si la science moderne s'organise aujourd'hui de façon partagée dans le cadre d'universités et d'instituts qui emploient des chercheurs plein temps elle est le résultat d'un long processus historique à l'intersection de trois sphères politique productive et idéologique Cet ouvrage rend compte de cette marche de la science moderne et de son expansion dans le monde sur trois siècles XVIIIe XXIe faisant apparaître des traits typiques de l'institutionnalisation de la science en revenant sur les traces qui continuent de modeler le style de chaque discipline locale importance des Lumières chez les libéraux en Amérique latine lutte contre l'oppression coloniale en Inde en Grande Colombie et en Amérique latine aux XVIIIe et XIXe siècles initiative de souverains soucieux de préserver leur régime ou leur territoire Egypte et Turquie du XIXe siècle face à l'avancée des impérialismes empires des marges européennes ou encore de factions militaires modernistes et nationalistes Egypte nassérienne Brésil En historicisant le développement des sciences les auteurs de cet ouvrage vont au-delà de la thèse devenue classique d'un effacement d'une globalisation des modes de production scientifique commandée avant tout par un cheveau de relations individuelles pharaoniques et créatives Ils montrent au contraire l'existence d'une tension permanente entre la construction de ces réseaux scientifiques mondiaux et un équilibre par des soutiens régionaux et surtout nationaux très divers témoignant que les compétences scientifiques et techniques restent considérées par ceux qui les abritent comme une ressource hautement stratégique

La science des civilisés et la science allemande Pierre Jean Achalme, 1916 Ce livre reproduit des articles de La Revue Ils portent sur la science en général mais de préférence sur la chimie organique qui est la spécialité de l'auteur Ils avaient été traduits dès 1915 dans la revue allemande Umschau qui avait sollicité des réponses de la part d'Ostwald et d'autres savants allemands mis en cause Ces réponses sont traduites en annexe et commentées par Pierre Achalme
