

PLEASE READ THESE INSTRUCTIONS BEFORE INSTALLING YOUR FUEL SYSTEM. If your injector was shipped directly from the factory, it should be set up for your application. A set of bypass jets is furnished which includes a jetting card showing the engine information and settings. The butterflies and metering valve are set before shipment. The metering valve is set using our leak tester. The leak percentage shown is specific to our leak tester only and will probably be different from other types of leak testers.

The butterflies must be adjusted before starting the engine. Start with .005 clearance when using gasoline and .003 for alcohol. Refer to butterfly adjustment instructions for the correct procedure.

#### IDLE CONTROL

The idle mixture is controlled by the short turnbuckle. To richen the idle, make the turnbuckle shorter. To lean the idle, make it longer. Make this adjustment in small increments by rotating the turnbuckle only 2 or 3 flats at a time. This adjustment controls the idle mixture and engine response only and has no effect on full throttle operation.

The metering valve is equipped with two return lines, one for the idle circuit, and the other for the main bypass return. These check valves should not be interchanged because they are set at different pressures.

#### MAIN BYPASS JET

The main bypass jet is located under the brass hex cap on top of the metering block. This controls the fuel mixture at full throttle. To richen the fuel mixture, use a smaller bypass. A larger diameter bypass will lean mixture. The bypass has very little effect on the idle mixture and should not be changed to cure problems at idle.

#### MAINTENANCE

The Fuel system should be drained and the pump and metering valve should be lubricated when not in use. We recommend using light oil, LPS-3 or equivalent for the fuel pump and metering valve.
