- ii. I chose this question because i lost all the marks for this question because i did not follow instructions.
- iii. Marker's comments "The question requires you to cite examples from the text."

i agree with the comments because without citing examples from the paragraph, my answer becomes general. A Grammar of Tundra Nenets Irina Nikolaeva, 2014-08-19 The book is the first substantial description of Tundra Nenets a highly endangered Uralic language spoken in Western Siberia and the north of European Russia destined for the international linguistic community Its purpose is to provide a thorough documentation of all of the major grammatical phenomena in the language The grammar particularly emphasizes the description of syntax because this has traditionally

been a very neglected area of Nenets studies Many syntactic aspects have not received a systematic treatment in the existing literature or have not been addressed at all Since the existing works are not easily available incomplete or idiosyncratically presented Tundra Nenets syntax has played little or no role in the considerations of modern linguists whether more descriptively or theoretically inclined The book is largely descriptive it is not intended to address theoretical questions per se and the description is not meant to be formulated within a particular framework However it identifies and discusses issues which are of broad typological and theoretical interest The description is richly exemplified Most of the cited examples are the result of fieldwork conducted by the in various locations They are sentences produced by native speakers either spontaneously or elicited in response to questions posed in Russian Other examples are excerpts from original texts

Swarm Robotics Giandomenico Spezzano,2019-05-13 Collectively working robot teams can solve a problem more efficiently than a single robot while also providing robustness and flexibility to the group Swarm robotics model is a key component of a cooperative algorithm that controls the behaviors and interactions of all individuals The robots in the swarm should have some basic functions such as sensing communicating and monitoring and satisfy the following properties Autonomy Individuals that create the swarm robotic system are autonomous robots They are independent and can interact with each other and the environment Large number They are in large number enabling cooperation Scalability and robustness A new unit can be easily added to the system so the system can be easily scaled A greater number of units improves the performance of the system The system is quite robust to the loss of some units as some units still remain to perform although the system will not perform to its maximum capabilities Decentralized coordination The robots communicate with each other and with their environment to make final decisions Flexibility The swarm robotic system has the ability to generate modularized solutions to different tasks *Selected Papers from the 14th Estuarine and Coastal Modeling Conference* Richard P.
