

FORCES

FORCES

FORCES are caused by interactions to provide evidence of the effects of balanced and unbalanced forces on the motion of an object.

FORCES have observable and measurable effects on an object's motion. To provide evidence that a pattern can be used to predict future motion.

Balanced Forces

Forces are everywhere. They can be balanced or unbalanced when two opposing forces are balanced, they do not cause any change in the motion (movement) of an object. You can think of balanced forces as canceling each other out. The object that is being acted on by the forces will not have any change in its motion. Think of two teams playing tug-of-war. If the teams are perfectly matched neither team will win. The game could go on forever because they are an example of balanced forces. A mirror or picture frame hanging on the wall is another example of balanced forces. The force of gravity pulls down, while the hook or magnet pulling it up is another force holding it up. They are equal and opposite. Another word for balanced forces is equilibrium. If the forces are balanced, the object stays exactly where it is and its motion does not change.

Unbalanced Force

Unlike balanced forces, unbalanced forces DO NOT! But moving can be put into motion when that either pushes them or pulls them. Think of a ball when a player runs up to kick it, the ball will move. The motion will depend on the strength and direction of the force. If the force is strong enough, the ball will move a long way. If the force is weak, the ball will move a short way. But it will move.
