Gens Cornes Et Crocs:

The Ashgate Research Companion to Planning Theory Patsy Healey, 2016-11-03 At a time of potentially radical changes in the ways in which humans interact with their environments through financial environmental and or social crises the raison d'être of spatial planning faces significant conceptual and empirical challenges This Companion presents a multidimensional collection of critical narratives of conceptual challenges for spatial planning The authors draw on various disciplinary traditions and theoretical frames to explore different ways of conceptualising spatial planning and the challenges it faces Through problematising planning itself the values which underpin planning and theory practice relations contributions make visible the limits of established planning theories and illustrate how by thinking about new issues or about issues in new ways spatial planning might be advanced both theoretically and practically There cannot be definitive answers to the conceptual challenges posed but the authors in this collection provoke critical questions and debates over important issues for spatial planning and its future A key question is not so much what planning theory is but what might planning theory do in times of uncertainty and complexity An underlying rationale is that planning theory and practice are intrinsically connected The Companion is presented in three linked parts issues which arise from an interactive understanding of the relations between planning ideas and the political institutional contexts in which such ideas are put to work key concepts in current theorising from mainly poststructuralist perspectives and what discussion on complexity may offer planning theory and practice

Faces of the Wolf Bernard Charlier, 2015-03-31 In his study of the human non human relationships in Mongolia Bernard Charlier explores the role of the wolf in the ways nomadic herders relate to their natural environment and to themselves The wolf as the enemy of the herds and a prestigious prey is at the core of two technical relationships herding and hunting endowed with particular cosmological ideas The study of these relationships casts a new light on the ways herders perceive and relate to domestic and wild animals It convincingly undermines any attempt to consider humans and non humans as entities belonging a priori to autonomous spheres of existence which would reify the nature society boundary into a phenomenal order of things and so justify the identity of western epistemology

Wolf Conflicts Ketil Skogen, Olve Krange, Helene Figari, 2017-05-01 Wolf populations have recently made a comeback in Northern Europe and North America These large carnivores can cause predictable conflicts by preying on livestock and competing with hunters for game But their arrivals often become deeply embedded in more general societal tensions which arise alongside processes of social change that put considerable pressure on rural communities and on the rural working class in particular Based on research and case studies conducted in Norway **Wolf Conflicts** discusses various aspects of this complex picture including conflicts over land use and conservation and more general patterns of hegemony and resistance in modern societies

Biosecurity Andrew Dobson, Kezia Barker, Sarah L. Taylor, 2013-08-15 Biosecurity is the assessment and management of potentially dangerous infectious diseases quarantined pests invasive alien species living modified organisms

and biological weapons It is a holistic concept of direct relevance to the sustainability of agriculture food safety and the protection of human populations including bio terrorism the environment and biodiversity Biosecurity is a relatively new concept that has become increasingly prevalent in academic policy and media circles and needs a more comprehensive and inter disciplinary approach to take into account mobility globalisation and climate change In this introductory volume biosecurity is presented as a governance approach to a set of concerns that span the protection of indigenous biological organisms agricultural systems and human health from invasive pests and diseases It describes the ways in which biosecurity is understood and theorized in different subject disciplines including anthropology political theory ecology geography and environmental management It examines the different scientific and knowledge practices connected to biosecurity governance including legal regimes ecology risk management and alternative knowledges The geopolitics of biosecurity is considered in terms of health biopolitics and trade governance at the global scale Finally biosecurity as an approach to actively secure the future is assessed in the context of future risk and uncertainties such as globalization and climate change

Environmental Changes Céline Granjou, 2016-02-20 This book addresses environmental changes and how they reconfigure society's relationship to the future It argues that Man does not build his future alone instead environmental changes are also proof of the future making capacity of non human beings The author elaborates on the notion of the futures of Nature by drawing on theoretical contributions by recent ground breaking literature in the field of environmental humanities The book also builds on a sociological investigation into the practices implemented by environmental scientists experts and managers confronted with environmental changes Thinking of nature in terms of its futures requires us to overcome the rooted philosophical tradition that associates nature with permanence and society with creative change This is a daunting task which can only be successful if we look beyond the long lasting influence of the human centered categories of innovation development and civilization that social sciences have themselves contributed to coining We need to consider the active capacities of change and transformation of living beings and matter itself This book is of academic interest but is also for managers in different fields and areas affected by environmental changes Featuring a focus on the notion of future and the aim to locate an approach for the future in sociology Elaborates on the notion of more than human futures drawing on S Whatmore's words Offers grounded and detailed insights into three case study examples

Homme et animal, la question des frontières Valérie Camos, Pierre Guenancia, Jean-Pierre Sylvestre, Frank Cézilly, 2009-07-10 Certains arguments permettent aujourd'hui de révaluer la thèse de la singularité de l'homme Du point de vue de l'identité psychologique et des performances cognitives la différence entre les grands singes et l'homme ne serait pas de nature mais seulement de degrés La biologie considère généralement les distinctions homme animaux comme des différences dans la nature et non entre nature et culture Au plan éthique les formes d'appropriation des animaux ont conduit à instrumentaliser cela s'ajoutent les menaces sur les espèces sauvages dues au développement industriel Certains admettent ainsi une véritable solidarité d'ordre moral ou juridique entre les formes

Nature à vendre Virginie Maris, 2014-03-10 Si l'on sait depuis longtemps que le bien-être humain dépend en partie de la nature cette dépendance est aujourd'hui mise en exergue travers la notion de services écosystémiques définis comme tant les bénéfices que les pertes humains tirent du fonctionnement des écosystèmes Cet ouvrage met en évidence les limites de cette approche pour penser notre rapport à la nature et notre responsabilité vis-à-vis de sa protection Après un aperçu historique de la conception des relations entre le bien-être humain et le fonctionnement des écosystèmes l'auteure décrit l'émergence des services écosystémiques comme nouvelle norme dans le monde de la conservation Elle montre comment cette approche a renforcé et multiplié les tentatives d'évaluation monétaire de la biodiversité et la façon dont ces deux mouvements d'instrumentalisation de la nature puis de quantification des bénéfices qu'on en tire participent d'une dynamique de marchandisation de la biodiversité

Sociologie des changements environnementaux Céline Granjou, 2015-12-01 À l'heure de l'Anthropocène où la puissance technique exercée par l'homme sur son milieu naturel n'a jamais été aussi grande le tournant du XXI^e siècle est moins marqué par la fin de la nature que par l'irruption de ses futurs Cet ouvrage pose les bases d'une sociologie des changements environnementaux qui prend acte que l'homme n'est plus le seul acteur de son devenir En développant trois exemples le retour des loups dans les Alpes la crise de la vache folle et les évolutions de la biodiversité ce livre analyse les régimes d'anticipation environnementale expérimentés par les scientifiques les experts et les gestionnaires Il nous invite rompre avec le dualisme classique qui fait de la nature le cadre fixe et atemporel du changement social et du progrès Conversant avec les contributions récentes des humanités environnementales Sociologie des changements environnementaux s'attache rouvrir notre conception de la temporalité sociale en pointant comment les animaux et les mécanismes écologiques stimulent eux aussi le futur

Tourismus und Siedlungsentwicklung in den französischen Alpen Heidi Elisabeth Megerle, 2018-10-10 Die französischen Hochalpen unterliegen seit dem Ende des 18. Jahrhunderts tiefgreifenden Transformationsprozessen Als Reaktion auf massive Abwanderungsprozesse erfolgte in Savoyen ein zentralstaatlich gelenkter touristischer Ausbau mit signifikantem Anstieg von Siedlungsdichte und Bevölkerungszahlen Zeitgleich wurde inmitten dieser Region der erste französische Nationalpark Vanoise ebenfalls in einem top down Ansatz ausgewiesen Von Beginn an vor Ort stark umstritten wurde der Nationalpark vielfach als hemmender Faktor der touristischen Entwicklung gesehen Heute ist Savoyen Weltmarktführer im Wintertourismus Urbanisierte Retortenstationen grenzen in einem peripheren ländlichen Raum an Großschutzgebiete Vor Ort ist nicht nur das Aufeinanderprallen unterschiedlichster Akteursgruppen mit deutlich divergierenden Vorstellungen in Bezug auf zukünftige Entwicklungen und Prioritätensetzungen zu verzeichnen sondern auch von lokaler Kultur und massiven Auseinandersetzungen Diese Konfliktkonstellationen sind ihrerseits eingebettet in globale Megatrends wie Klima und Demographischer Wandel Veränderungen der touristischen Nachfrage und einer zunehmenden Bedeutung nachhaltiger Innovationen Anhand von vier Fallbeispielen werden diese komplexen Transformationsprozesse und die resultierenden Konfliktkonstellationen exemplarisch dargestellt Das Vorliegen umfangreicher Kartierungen Ende der 1970er Jahre ermöglicht einen in dieser Form einmaligen zeitlichen Vergleich ergänzt durch Befragungen relevanter Akteure

Administrer la nature Adel Selmi, 2006 En se fondant sur l'histoire et l'évolution de la gestion du Parc national de la Vanoise l'auteur étudie les changements dus aux mutations dans le domaine de l'écologie et l'émergence des concepts de biodiversité et de développement durable qui ont orienté les politiques de conservation et de gestion des espaces protégés

Le retour des paysans? Laurent Auclair, Chantal Aspe, Patrick Baudot, 2006

L'animal sauvage entre nuisance et patrimoine Julien

Alleau,Émilie-Anne Pépy,2009 Dans un contexte social et médiatique largement ouvert sur les thématiques et problématiques environnementales l'animal sauvage s'invite dans les débats humains. Objet de discussions passionnées de la part des scientifiques, des naturalistes et des cologues professionnels aussi bien qu'amateurs, il a désormais acquis droit de cité dans les travaux des sciences humaines et sociales. Dans leur diversité, les animaux non domestiques ont parfois été redoutés ou chassés pour procurer des ressources indispensables à la vie humaine. Le monde contemporain a commencé à brouiller les frontières que l'on croyait solidement établies entre différents statuts accordés aux animaux : certaines espèces sont désormais considérées comme victimes de l'action humaine dans un contexte d'inquiétude grandissante face aux dégradations réelles ou supposées commises par les hommes à l'encontre des écosystèmes. Des animaux emblématiques tels que l'ours et le loup font l'objet de mesures de protection ou de restauration. Le brouillage des frontières entre nature et culture, domestique et sauvage, tant illustré par l'artificialisation d'espaces et d'espèces que l'on voudrait maintenir sauvages. Les études de cas rassemblées dans le présent ouvrage s'interrogent sur la place de l'animal en France, cadre d'enquête volontairement restreint mais qui permet cependant un vaste questionnement interdisciplinaire balayant différents espaces littoraux, montagnards mais aussi urbains sur une durée longue.
