Language, Literacy and Learning in Primary Schools Olatunde A. Adekola, 2007 Language Literacy and Learning in Primary Schools is a synthesis of the findings arising from four years of policy research and development in Nigeria's primary schools that focused on the gap between what teachers should know and be able to do and the realities of teaching and learning in classrooms. It begins by critically examining the outcomes of primary schooling as measured by learning achievement results from national assessments and by identifying some core learning problems for Nigerian primary school children. It reviews the findings from recent research reports that studied teaching and learning processes in primary school classrooms and it identifies the pedagogical issues in primary classrooms that contribute to poor learning achievements. This report describes a research and development program that set out to improve teaching and learning in core learning skill areas of the curriculum. This study identifies priority areas for teachers' professional development. It suggests a policy framework for the continuing professional development of primary school teachers including the initial preparation of teachers and their induction into teaching. It proposes medium and long term strategies to bring about the desired changes in teaching and learning through school-based approaches to teacher development. *The Reference Catalogue of Current Literature*, 1913

Tomorrow's High School Gene Bottoms, 2022-04-11 How do some high schools produce graduates that consistently achieve at high levels? Would you believe there's a set of proven strategies that could help you deliver similar impressive results and better prepare students for the world after high school? High schools in the United States face a startling reality: many graduates are unprepared for success in postsecondary studies or for high demand, well-paying jobs in a rapidly changing economy. Although this situation is alarming, the high schools that have embraced new ways of learning show us what is possible. Drawing from his experience with the High Schools That Work initiative, Gene Bottoms offers educators a path forward by urging them to pursue bold goals and outlining bold actions for achieving those goals. His vision is clear: replace the traditional model of secondary education with one that engages students in a rigorous curriculum that combines a solid academic core with intellectually demanding career pathway courses. The notion that nearly all students can achieve at high levels is borne out by numerous examples of high schools including those with traditionally underperforming student populations that have used key strategies to help all students realize their potential. Bottoms explains the root causes of the current shortcomings in high school education and then specifies critical components of successful transformation: Shared leadership, Powerful assignments especially in math literacy and career technical education, planned and executed by academic and career pathway teachers working together, Strengthened connections between middle school and high school, A redesigned senior year and Comprehensive counseling and advisory programs. Provocative and persuasive in its sense of urgency, *Tomorrow's High School* offers proven and practical solutions to finally make high schools a rich and rewarding experience for all students, whatever their future college
