

## HIV SCREENING WORKSHOP

### Exercise

#### INTRODUCTION:

Since its first discovery in 1981, AIDS became a pandemic affliction. Actually, over 30 million people are living with HIV (i.e., are infected by the human immunodeficiency virus), or with AIDS (i.e., are suffering from the acquired immune deficiency syndrome), respectively, with nearly about 5 million people dying from AIDS, and with nearly about 15 million new HIV-infections. In Germany, today there are about 75 000 HIV infected people, 6000 of whom living with AIDS, and about 1000 people dying from it, and, last but not least 2000 new HIV-infections.

The infection with the HIV-virus leads to AIDS after an average 10 years of incubation time. Slowly, but continuously, an important part of the immune-system, mainly affecting the T4-helper-cells, is weakening. People then, together with a dramatic reduction of their general condition, suffer from opportunistic infections (i.e. AIDS) and die.

Since 1984, HIV is known as the cause of the disease. Since 1985, there are different-HIV tests available (initially actually usually performed as two antibody tests (ELISA/ELISA and Western-Blot, now further an antigen test (PCR, so called 'wet test'). Since 1986, there is an effective drug treatment available (but at high costs regarding drug side-effects and an uncertain perspective due to emerging virus-resistance). A vaccination is not yet available.

#### GOAL:

The goal of this workshop is to focus on the problems associated with screening various groups of individuals for HIV (without antibody test) to develop an understanding of the principles of screening in populations with differing prevalences of the condition to be detected, and to apply that knowledge to clinical practice.

#### SPECIFIC OBJECTIVES:

After completing this workshop the student should be able to:

1. Define, derive, and interpret measures of sensitivity, specificity, positive and negative predictive value;
2. Discuss the trade-offs between sensitivity and specificity;
3. Describe the relationship between prevalence and predictive value (positive and negative PPV);
4. Apply such measures to clinical decision-making;
5. List the principles of a good screening program.

#### STUDENT ASSIGNMENTS:

Discuss the clinical scenario, develop a learning agenda, work through the exercise and draw conclusions which help you understand the screening issues and apply that understanding to clinical decision-making.

#### CLINICAL SCENARIO:

Review the following clinical scenario and think about how to approach the problem presented, and then try to discuss this with classmates.
