

Scenario 1: **Contaminated Sites: The Role of the Environmental Protection Agency (EPA) in Managing Contaminated Sites**

1. Identifying Contaminated Sites: How does the Environmental Protection Agency (EPA) identify and assess potential contamination risks to human health and the environment?

2. Managing Contaminated Sites: What are the key steps in managing contaminated sites, and how does the EPA coordinate with other agencies?

3. Monitoring and Assessment: How does the EPA monitor and assess the effectiveness of site management actions?

1. The EPA provides a regulatory framework for managing contaminated sites, including the Superfund program, which is the primary federal program for managing hazardous waste sites. The EPA also provides technical assistance and funding to states and local governments for managing contaminated sites.
2. The EPA identifies contaminated sites through a variety of sources, including:
 - **Site-specific information:** Information from site owners, operators, and other parties involved in the site's operation.
 - **Public information:** Information from the public, including complaints and reports of contamination.
 - **Environmental monitoring:** Monitoring of the environment for signs of contamination, such as groundwater monitoring.
 - **Historical information:** Information about past activities at the site, such as industrial operations.
 - **Other sources:** Information from other agencies, such as the Department of Defense, which manages many military sites.
3. The EPA assesses the risks posed by contaminated sites through a variety of methods, including:
 - **Site characterization:** Gathering information about the site's history, current activities, and potential contamination.
 - **Human health risk assessment:** Assessing the potential for human exposure to contaminants and the resulting health risks.
 - **Ecological risk assessment:** Assessing the potential for contamination to harm the environment.
 - **Remediation risk assessment:** Assessing the risks associated with different remediation options.

Scenario 2: **Contaminated Sites**
