

integration and globalization that began in the eighties and nineties are picking up speed in the 2000s. Trade liberalization and economic integration continued to proceed at both the regional and global levels. Despite sovereign debt crisis in Europe, more EU member countries have adopted the common currency, the euro, that effectively became the second global currency after the U.S. dollar. In the last few years, however, economic nationalism has been gaining some popularity, as exemplified by the Brexit decision of the United Kingdom and the so-called "America First" policies of the Trump Administration. To the extent that economic nationalism is a populist response to the global financial crisis and Great Recession, it may subside as the world economy continues to recover.

4. How is a country's economic well-being enhanced through free international trade in goods and services?

Answer: According to David Ricardo, with free international trade, it is mutually beneficial for two countries to each specialize in the production of the goods that it can produce *relatively* most efficiently and then trade those goods. By doing so, the two countries can increase their combined production, which allows both countries to consume more of both goods. This argument remains valid even if a country can produce both goods more efficiently in absolute terms than the other country. International trade is not a 'zero-sum' game in which one country benefits at the expense of another country. Rather, international trade could be an 'increasing-sum' game from which all players become winners.

5. What considerations might limit the extent to which the theory of comparative advantage is realistic?

Answer: The theory of comparative advantage was originally advanced by the nineteenth century economist David Ricardo as an explanation for why nations trade with one another. The theory claims that economic well-being is enhanced if each country produces what it has a comparative advantage in producing relative to other countries, and then trade products. Underlying the theory are the assumptions of free trade between nations and that the factors of production (labor, technological know-how, and capital) are relatively immobile. To the extent that these assumptions do not hold, the theory of comparative advantage may not realistically describe international trade. In addition, free trade produces winners and losers and if the losers are not compensated, free trade may face political opposition from them.

6. What are multinational corporations (MNCs) and what economic roles do they play?
