## Evidence of Photosynthesis Lab 1

Chapter 3 Lesson 1

**Background Information: PHOTOSYNTHESIS** is the process during which a plant's chlorophyll traps light energy and sugars are produced. In plants, photosynthesis occurs only in cells with chloroplasts. The chemical reaction for photosynthesis is:

Green plants use energy from light to combine carbon dioxide and water to make food. **Light energy** is converted to chemical energy and is stored in the food that is made by green plants. The light used in photosynthesis is absorbed by a green pigment called **chlorophyll**. Each foodmaking cell in a plant leaf contains chlorophyll in small cells called **chloroplasts**. In chloroplasts, light energy causes water drawn from the soil to split into molecules of hydrogen and oxygen. In a series of chemical reactions, the hydrogen combines with carbon dioxide from the air, forming a simple sugar. Oxygen from the water molecules is given off in the process. From sugar, along with nutrients from the soil, green plants can make starch, fat, protein, vitamins, and other complex compounds necessary for life. Photosynthesis supplies the chemical energy needed to produce these compounds.

When a person exhales, carbon dioxide is released.

Bromothymol blue solution, BTB, can indicate the presence of carbon dioxide in the water. When little or no carbon dioxide is present, BTB will show a blue color. Depending upon the amount of carbon dioxide, BTB will change to green or yellow. Yellow indicates more carbon dioxide.

**Algae and Man** Daniel F. Jackson, 2012-12-06 With the continuous increase in human population and its constant demands on the aquatic environment there has been a compounding of the interrelationships between algae and man These relatively simple green plants not too long ago were often considered as merely biological curiosities Within the past twenty five years with advances in technology and the increased eutrophication of lakes and streams the interplay between algae and man has become more complex and more important Problems of taste odor toxicity or obnoxious growth caused by algae are unfortunately quite familiar to the water supplier and to the public health worker Algae have met their role in the space age as a possible source for food or as a gas exchanger In order to explore any of these practical problems it is essential to have adequate basic knowledge of algal taxonomy physiology cytogenetics and ecology This book is the outgrowth of a North Atlantic Treaty Organization Advanced Study Institute in which authorities in both the applied and basic fields of phycology as well as in cognate disciplines met and discussed various topics related to algae It is of significance to note that this was the first NATO Advanced Study Institute to be held in the United States and that it had for its theme a subject which is of import for the welfare of all mankind

Salinity Tolerance in Plants Jose Antonio Hernández Cortés, 2019-06-12 Salt stress is one of the most damaging abiotic stresses because most crop plants are susceptible to salinity to different degrees According to the FAO about 800 million Ha of land are affected by salinity worldwide Unfortunately this situation will worsen in the context of climate change where there will be an overall increase in temperature and a decrease in average annual rainfall worldwide This Special Issue presents different research works and reviews on the response of plants to salinity focused from different points of view physiological biochemical and molecular levels Although an important part of the studies on the response to salinity have been carried out with Arabidopsis plants the use of other species with agronomic interest is also notable including woody plants Most of the conducted studies in this Special Issue were focused on the identification and characterization of candidate genes for salt tolerance in higher plants This identification would provide valuable information about the molecular and genetic mechanisms involved in the salt tolerance response and it also supplies important resources to breeding programs for salt tolerance in plants
