KdV '95 Michiel Hazewinkel, Hans W. Capel, Eduard M. de Jager, 2012-12-06 Exactly one hundred years ago in 1895 G de Vries under the supervision of D J Korteweg defended his thesis on what is now known as the Korteweg de Vries Equation They published a joint paper in 1895 in the Philosophical Magazine entitled On the change of form of long waves advancing in a rectangular canal and on a new type of long stationary wave and for the next 60 years or so no other relevant work seemed to have been done In the 1960s however research on this and related equations exploded There are now some 3100 papers in mathematics and physics that contain a mention of the phrase Korteweg de Vries equation in their title or abstract and there are thousands more in other areas such as biology chemistry electronics geology oceanology

meteorology etc And of course the KdV equation is only one of what are now called Liouville completely integrable systems The KdV and its relatives continually turn up in situations when one wishes to incorporate nonlinear and dispersive effects into wave type phenomena This centenary provides a unique occasion to survey as many different aspects of the KdV and related equations The KdV equation has depth subtlety and a breadth of applications that make it a rarity deserving special attention and exposition
