		In 2–6 weeks, depending on severity, evaluate level of asthma control that is achieved. • Children 0–4 years old: If no clear benefit is observed in 4–6 weeks, stop treatment and consider alternative diagnosis or adjusting therapy. • Children 5–11 years old: Adjust therapy accordingly.							

*Notes:

- Level of severity is determined by both impairment and risk. Assess impairment domain by caregiver’s recall of previous 2–4 wk. Assign severity to the most severe category in which any feature occurs.
 - Frequency and severity of exacerbations may fluctuate over time for patients in any severity category. Currently there are inadequate data to correspond frequencies of exacerbations with different levels of asthma severity. In general, more frequent and severe exacerbations (eg, requiring urgent, unscheduled care, hospitalization, or ICU admission) indicate greater underlying disease severity. For treatment purposes, patients with ≥2 exacerbations described may be considered the same as patients who have persistent asthma, even in the absence of impairment levels consistent with persistent asthma.
- ICU, intensive care unit; N/A, not applicable.
