Formal Specification Level Concepts Methods And Algorithms:

    Formal Specification Level Mathias Soeken,Rolf Drechsler,2014-11-12 This book introduces a new level of abstraction that closes the gap between the textual specification of embedded systems and the executable model at the Electronic System Level ESL Readers will be enabled to operate at this new Formal Specification Level FSL using models which not only allow significant verification tasks in this early stage of the design flow but also can be extracted semi automatically from the textual specification in an interactive manner The authors explain how to use these verification tasks to check conceptual properties e g whether requirements are in conflict as well as dynamic behavior in terms of execution traces

research from the theoretical point of view as weIl as from the practical point of view There are many general textbooks on algorithmics and several specialized books devoted to particular approaches such as local search randomization approximation algorithms or heuristics But there is no textbook that focuses on the design of algorithms for hard computing tasks and that systematically explains combines and compares the main possibilities for attacking hard algorithmic problems As this topic is fundamental for computer science this book tries to elose this gap Another motivation and probably the main reason for writing this book is connected to education The considered area has developed very dynamically in recent years and the research on this topic discovered several profound re sults new concepts and new methods Some of the achieved contributions are so fundamental that one can speak about paradigms which should be ineluded in the education of every computer science student Unfortunately this is very far from reality This is because these paradigms are not sufficiently known in the computer science community and so they are insufficiently communicated to students and practitioners
