The Science of Sugar Confectionery William P Edwards,2015-11-09 Confectionery is a topic close to many people s hearts and its manufacture involves some interesting science The confectionery industry is divided into three classes chocolate flour and sugar confectionery It is the background science of this latter category that is covered in *The Science of Sugar Confectionery* The manufacture of confectionery is not a science based industry as these products have traditionally been created by skilled confectioners working empirically In fact scientific understanding of the production process has only been acquired retroactively Historically however sugar confectionery has had technological synergies with the pharmaceutical industry such as making sugar tablets and applying panned sugar coatings This book gives an introduction to the subject with some basic definitions and commonly used ingredients and then moves on to discuss the chemistry of various types of sugar confectionery These include sugar glasses boiled sweets grained sugar products fondants toffees and fudges hydrocolloids gums pastilles and jellies and concludes with a chapter dedicated to sugar free confectionery

The International Confectioner ,1915 **The Technology of Cake Making** A.J. Bent,E.B. Bennion,G.S.T. Bamford,2013-03-09 The popularity of the 1973 fifth edition of *The Technology of Cake Making* has continued in many of the English speaking countries throughout the world This sixth edition has been comprehensively revised and brought up to date with new chapters on Cream butter and milkfat products Lactose Yeast aeration Emulsions and emulsifiers Water activity and Reduced sugar Eggs and egg products Baking fats and lower fat goods The chapters on Sugars Chemical aeration Nuts in confectionery Chocolate Pastries Nutritional value and Packaging have been completely rewritten The increased need for the continuous development of new products does not of necessity mean that new technology has to be constantly introduced Many of the good old favourites may continue to be produced for many years and they form suitable bench marks for new product development The sixth edition introduces the use of relative density to replace specific volume as a measure of the amount of aeration in a cake batter the use of relative density is in line with international agreement Specific volume is kept as a measurement of baked product volume since the industry is comfortable with the concept that subject to an upper limit an increase in specific volume coincides with improvement in cake quality
