

The first step in the process of creating a new product is to identify a need or a problem that the market has. This is often done through market research, which can involve surveys, focus groups, and other methods of gathering information from potential customers.

Once a need or problem has been identified, the next step is to develop a solution. This is often done through a process of brainstorming and prototyping. The solution should be designed to meet the needs of the market and to be profitable for the company.

After a solution has been developed, the next step is to create a business plan. This is a document that outlines the company's goals, strategies, and financial projections. It is used to attract investors and to guide the company's operations.

The final step in the process is to launch the product. This involves marketing the product to the target market and distributing it to customers. Once the product is launched, the company should continue to monitor the market and make adjustments as needed.

Digital Mammography Heinz-Otto Peitgen, 2003-03-07

This book comprises the scientific proceedings of the International Workshop on Digital Mammography IWDM held in Bremen Germany from June 22 to June 25 2002. Since its inception in 1992 IWDM has grown into the International Forum on Digital Mammography. The uniqueness of IWDM is its attractiveness to researchers, medical practitioners and industrial developers. Former workshops were held in San Jose USA 1992, York UK 1994, Chicago USA 1996, Nijmegen NL 1998 and Toronto Canada 2000. Each of these scientific events has been combined with very successful and focused industrial and research exhibits which demonstrated the milestones of digital mammography: hardware and software. Now that digital mammography is entering routine clinical use, we witness its strong impact on screening and diagnostic mammography, computer-aided detection, minimally invasive procedures and the development of systemic and integrated disease-oriented breast care. In view of this, the 2002 workshop provided a window to give us a glance at the future and the work which was presented in talks, posters and exhibits has demonstrated that IWDM 2002 will take a special place in the very successful sequence of IWDM events. Finally, as conference chair, I would like to thank all who have helped to prepare and run IWDM 2002: the Scientific Advisory Board for its excellent work in guaranteeing scientific significance, the Organizational Board for its hard work to accomplish an appropriate framework for the event and the industrial exhibitors and sponsors for their generous support.
