Mathematical Sciences and Statistics 2013 Adem Kilicman, Wah June Leong, Zainidin Eshkuvatov, 2014-03-16 This volume is devoted to the most recent discoveries in mathematics and statistics It also serves as a platform for knowledge and information exchange between experts from industrial and academic sectors The book covers a wide range of topics including mathematical analyses probability statistics algebra geometry mathematical physics wave propagation stochastic processes ordinary and partial differential equations boundary value problems linear operators cybernetics and number and functional theory It is a valuable resource for pure and applied mathematicians statisticians engineers and scientists A Richer Picture of Mathematics David E. Rowe, 2018-02-13 Historian David E Rowe captures the rich tapestry of mathematical creativity in this collection of essays from the Years Ago column of The Mathematical Intelligencer With topics ranging from ancient Greek mathematics to modern relativistic cosmology this collection conveys the impetus and spirit of Rowe's various and many faceted contributions to the history of mathematics Centered on the Göttingen mathematical tradition these stories illuminate important facets of mathematical activity often overlooked in other accounts Six sections place the essays in chronological and thematic order beginning with new introductions that contextualize each section The essays that follow recount episodes relating to the section's overall theme All of the essays in this collection with the exception of two appeared over the course of more than 30 years in The Mathematical Intelligencer Based largely on archival and primary sources these vignettes offer unusual insights into behind the scenes events Taken together they aim to show how Göttingen managed to attract an extraordinary array of talented individuals several of whom contributed to the development of a new mathematical culture during the first decades of the twentieth century A Contemporary Study of Iterative Methods A. Alberto Magrenan, Ioannis Argyros, 2018-02-13 A Contemporary Study of Iterative Methods Convergence Dynamics and Applications evaluates and compares advances in iterative techniques also discussing their numerous applications in applied mathematics engineering mathematical economics mathematical biology and other applied sciences It uses the popular iteration technique

in generating the approximate solutions of complex nonlinear equations that is suitable for aiding in the solution of advanced problems in engineering mathematical economics mathematical biology and other applied sciences Iteration methods are also applied for solving optimization problems In such cases the iteration sequences converge to an optimal solution of the problem at hand Contains recent results on the convergence analysis of numerical algorithms in both finite dimensional and infinite dimensional spaces Encompasses the novel tool of dynamic analysis for iterative methods including new developments in Smale stability theory and polynomiography Explores the uses of computation of iterative methods across non linear analysis Uniquely places discussion of derivative free methods in context of other discoveries aiding comparison and contrast between options

The Quadratic Reciprocity Law Oswald Baumgart, 2015-05-27 This book is the English translation of Baumgart s thesis on the early proofs of the quadratic reciprocity law *ber das quadratische Reciprocit tsgesetz Eine vergleichende Darstellung der Beweise* first published in 1885 It is divided into two parts The first part presents a very brief history of the development of number theory up to Legendre as well as detailed descriptions of several early proofs of the quadratic reciprocity law The second part highlights Baumgart s comparisons of the principles behind these proofs A current list of all known proofs of the quadratic reciprocity law with complete references is provided in the appendix This book will appeal to all readers interested in elementary number theory and the history of number theory

Analysis and Topology in Nonlinear Differential Equations Djairo G de Figueiredo, João Marcos do Ó, Carlos Tomei, 2014-06-16 This volume is a collection of articles presented at the Workshop for Nonlinear Analysis held in Jo o Pessoa Brazil in September 2012 The influence of Bernhard Ruf to whom this volume is dedicated on the occasion of his 60th birthday is perceptible throughout the collection by the choice of themes and techniques The many contributors consider modern topics in the calculus of variations topological methods and regularity analysis together with novel applications of partial differential equations In keeping with the tradition of the workshop

emphasis is given to elliptic operators inserted in different contexts both theoretical and applied Topics include semi linear and fully nonlinear equations and systems with different nonlinearities at sub and supercritical exponents with spectral interactions of Ambrosetti Prodi type Also treated are analytic aspects as well as applications such as diffusion problems in mathematical genetics and finance and evolution equations related to electromechanical devices *Advances in Iterative Methods for Nonlinear Equations* Sergio Amat, Sonia Busquier, 2016-09-27 This book focuses on the approximation of nonlinear equations using iterative methods Nine contributions are presented on the construction and analysis of these methods the coverage encompassing convergence efficiency robustness dynamics and applications Many problems are stated in the form of nonlinear equations using mathematical modeling In particular a wide range of problems in Applied Mathematics and in Engineering can be solved by finding the solutions to these equations The book reveals the importance of studying convergence aspects in iterative methods and shows that selection of the most efficient and robust iterative method for a given problem is crucial to guaranteeing a good approximation A number of sample criteria for selecting the optimal method are presented including those regarding the order of convergence the computational cost and the stability including the dynamics This book will appeal to researchers whose field of interest is related to nonlinear problems and equations and their approximation

Integral Transforms and Operational Calculus H. M. Srivastava, 2019-11-20 Researches and investigations involving the theory and applications of integral transforms and operational calculus are remarkably wide spread in many diverse areas of the mathematical physical chemical engineering and statistical sciences This Special Issue contains a total of 36 carefully selected and peer reviewed articles which are authored by established researchers from many countries Included in this Special Issue are review expository and original research articles dealing with the recent advances on the topics of integral transforms and operational calculus as well as their multidisciplinary applications [Sampling Theory, a Renaissance](#) Götz E. Pfander, 2015-12-08 Reconstructing or approximating objects from seemingly incomplete information is a frequent challenge in mathematics science and engineering A multitude of tools designed to recover hidden information are based on Shannon's classical sampling theorem a central pillar of Sampling Theory The growing need to efficiently obtain precise and tailored digital representations of complex objects and phenomena requires the maturation of available tools in Sampling Theory as well as the development of complementary novel mathematical theories Today research themes such as Compressed Sensing and Frame Theory re energize the broad area of Sampling Theory This volume illustrates the renaissance that the area of Sampling Theory is currently experiencing It touches upon trendsetting areas such as Compressed Sensing Finite Frames Parametric Partial Differential Equations Quantization Finite Rate of Innovation System Theory as well as sampling in Geometry and Algebraic Topology
