Progress in Spatial Data Handling Andreas Riedl, Wolfgang Kainz, Gregory A. Elmes, 2006-09-01 Since the first symposium in 1984 the International Symposia on Spatial Data Handling SDH has become a major resource for recent advances in GIS research The International Symposium on Spatial Data Handling is regarded as a premier international research forum for GIS All papers are fully reviewed by an international program committee composed of experts in the field **GIS for Business and Service Planning** Paul A. Longley, Graham Clarke, 1996-02-14 GIS for Business and Service Planning Edited by Paul Longley Graham Clarke The field of geographical information systems GIS is developing rapidly finding applications in an ever widening range of commercial contexts This volume examines the practical use of GIS for business and service planning It considers ways in which GIS may be customised to meet specific user requirements and tackle the applied research challenges of the late 1990s GIS for Business and Service Planning introduces the management analysis and modelling of information within GIS and considers some of the basic problems and pitfalls that can occur in practice covers the major topics of geodemographics and how geographical information can be manipulated and merged into business application databases discusses the relative merits of customised versus proprietary solutions to business application databases examines the range of consultancy applications of GIS for business using international case studies assessing how recent applications have benefited from research developments critically assesses GIS in the market place and evaluates different GIS strategies GIS for Business and Service Planning is essential reading for GIS professionals marketers GIS students and management scientists The other contributors Peter Batey University of Liverpool Mark Birkin GMAP Peter Brown University of Liverpool Martin Clarke GMAP Paul Cresswell SPA Marketing Systems David Maguire ESRI US David Martin University of Southampton Ian Masser University of Sheffield Stan Openshaw University of Leeds Nora Sherwood GIS World and Robin Waters GeoInformation International *Multidimensional Geographic Information Science* Jonathan Raper, 2000-11-23 The way people normally view a GIS is 2 dimensional a greatly limiting form However as developments occur within the field researchers and practitioners are finding ways to make a GIS 3 dimensional and in some instances even 4 dimensional Being able to view a GIS in more than 2 dimensions greatly enhances its usability This forward look in

Estimating Ore Grade Using Evolutionary Machine Learning Models Mohammad Ehteram, Zohreh Sheikh Khozani, Saeed Soltani-Mohammadi, Maliheh Abbaszadeh, 2022-12-27 This book examines the abilities of new machine learning models for predicting ore grade in mining engineering A variety of case studies are examined in this book A motivation for preparing this book was the absence of robust models for estimating ore grade Models of current books can also be used for the different sciences because they have high capabilities for estimating different variables Mining engineers can use the book to determine the ore grade accurately This book helps identify mineral rich regions for exploration and exploitation Exploration costs can be decreased by using the models in the current book In this book the author discusses the new concepts in mining

engineering such as uncertainty in ore grade modeling Ensemble models are presented in this book to estimate ore grade In the book readers learn how to construct advanced machine learning models for estimating ore grade The authors of this book present advanced and hybrid models used to estimate ore grade instead of the classic methods such as kriging The current book can be used as a comprehensive handbook for estimating ore grades Industrial managers and modelers can use the models of the current books Each level of ore grade modeling is explained in the book In this book advanced optimizers are presented to train machine learning models Therefore the book can also be used by modelers in other fields The main motivation of this book is to address previous shortcomings in the modeling process of ore grades The scope of this book includes mining engineering soft computing models and artificial intelligence **Spatial Decision Support Systems**

Spatial Decision Support System **Artificial Intelligent Methods for Handling Spatial Data** Jörg

Verstraete, 2018-08-31 This book provides readers with an insight into the development of a novel method for regridding gridded spatial data an operation required to perform the map overlay operation and apply map algebra when processing spatial data It introduces the necessary concepts from spatial data processing and fuzzy rulebase systems and describes the issues experienced when using current regridding algorithms The main focus of the book is on describing the different modifications needed to make the problem compatible with fuzzy rulebases It offers a number of examples of out of the box thinking to handle aspects such as rulebase construction defuzzification spatial data comparison etc At first the emphasis is put on the newly developed method and additional datasets containing information on the underlying spatial distribution of the data are identified After this an artificial intelligent system in the form of a fuzzy inference system is constructed using this knowledge and then applied on the input data to perform the regridding The book offers an example of how an apparently simple problem can pose many different challenges even when trying to solve it with existing soft computing technologies The workflow and solutions to solve these challenges are universal and may therefore be broadly applied into other contexts *Proceedings of Tenth International Congress on Information and Communication Technology* Xin-She

Sustainable E-Government in Pacific Island States Rowena Cullen, Graham Hassall, 2017-02-17. This book analyzes the common set of obstacles to the development and integration of government Information and Communication Technology (ICT) projects and effective e government initiatives in developing countries. It draws on the expertise and experience of more developed states in the Pacific notably Australia and New Zealand both highly rated in global rankings for e government and active in a variety of e government development projects across the region. There has been a general failure to identify priorities and align projects with local needs in ICT e government projects. Small Island Developing States or SIDS present a unique problem in terms of e government. Not only do they suffer from a common set of barriers to ICT development such as their remoteness, geographical dispersion, moist tropical climates, largely rural populations and lack of ICT capacity and infrastructure but are also dependent on external agencies for investment and must negotiate with powerful donors who have conflicting agendas. E government is widely regarded as transformational increasing efficiency, productivity, accountability, economic growth and citizen involvement. But while the governments of SIDS are committed to harnessing ICTs for effective government and economic development they face major challenges in establishing successful e government initiatives due to the problems outlined above coupled with a lack of HR capacities and appropriate strategies and policies. Drawing on the experience of the states mentioned above as well as regional quasi governmental bodies, nongovernmental organizations, NGOs, aid agencies and the private sector, the book will be of interest to researchers and students in the fields of e government, public administration, political science, communication, information science and social media. **Deposit and**
