An Optical Grooming Switch for High-speed Traffic Aggregation in Time, Space and Wavelength Philipp Vorreau,2010 In this book a novel optical switch is designed developed and tested The switch integrates optical switching transparent traffic aggregation grooming and optical regeneration Innovative switch subsystems are developed that enable these functionalities including all optical OTDM to WDM converters High capacity ring interconnection between metro core rings carrying 130 Gbit/s OTDM traffic and metro access rings carrying 43 Gbit/s WDM traffic is experimentally demonstrated The developed switch features flexibility in bandwidth provisioning scalability to higher traffic volumes and backward compatibility with existing network implementations in a future proof way

Generalized Low-Voltage Circuit Techniques for Very High-Speed Time-Interleaved Analog-to-Digital Converters Sai-Weng Sin,Seng-Pan U,Rui Paulo Martins,2010-09-29 Analog to Digital Converters ADCs play an important role in most modern signal processing and wireless communication systems where extensive signal manipulation is necessary to be performed by complicated digital signal processing DSP circuitry This trend also creates the possibility of fabricating all functional blocks of a system in a single chip System On Chip SoC with great reductions in cost chip area and power consumption However this tendency places an increasing challenge in terms of speed resolution power consumption and noise performance in the design of the front end ADC which is usually the bottleneck of the whole system especially under the unavoidable low supply voltage imposed by technology scaling as well as the requirement of battery operated portable devices Generalized Low Voltage Circuit Techniques for Very High Speed Time Interleaved Analog to Digital Converters will present new techniques tailored for low voltage and high speed Switched Capacitor SC ADC with various design specific considerations

High Time Andrew Potter, Daniel M. Weinstock, 2019-03-04 Canada has become the first G7 country to legalize cannabis and the world is watching The primary concern facing the Liberal government as it seeks to fulfill its 2015 campaign promise to legalize regulate and restrict access to marijuana is whether it can be done without making the situation worse As the Liberal platform pointed out the current regime lets illegal cannabis fall into the hands of minors pours large profits into organized crime and traps many people in the criminal justice system for what is arguably a victimless crime While the legalization of marijuana in Canada begins with a straightforward change of the criminal code its ramifications go far beyond this Legalization will have a serious impact on the country's international treaty commitments interprovincial relations taxation and regulatory regimes and social and health policies The essays in this book address these outcomes from three main perspectives the decades long political path to legalization the assumptions that underwrite the new policy in particular the desire to stamp out the black market and how legalization in Canada looks in an international context Bringing together analysis by policy makers and scholars including the architect of marijuana legislation in Portugal a trailblazing jurisdiction High Time provides an urgent and necessary overview of Canada's Cannabis Act

High Frequency Continuous Time Filters in Digital CMOS Processes Shanthi Pavan, Yannis Tsididis, 2007-05-08 There is an ever increasing trend towards putting entire systems on a single chip This means that analog circuits will have to coexist on the same substrate along with massive digital systems Since technologies are optimized with these digital systems in mind designers will have to make do with standard CMOS processes in the years to come We address analog filter design from this perspective Filters form important blocks in applications ranging from computer disc drive chips to radio transceivers In this book we develop the theory and techniques necessary for the implementation of high frequency hundreds of megahertz programmable continuous time filters in standard CMOS processes Since high density poly poly capacitors are not available in these technologies alternative capacitor structures have to be found Metal capacitors have low specific capacitance

An alternative is to use the inherently nonlinear capacitance formed by MOSFET gates In Chapter 2 we focus on the use of MOS capacitors as integrating elements A physics based model which predicts distortion accurately is presented for a two terminal MOS structure in accumulation Distortion in these capacitors as a function of signal swing and bias voltage is computed Chapter 3 reviews continuous time filter architectures in the light of bias dependent integrating capacitors We also discuss the merits and demerits of various CMOS transconductance elements The problems encountered in designing high frequency programmable filters are discussed in detail **The Edinburgh Encyclopedia** ,1832 **Circular** United States. Office of Education,1961
