**The Transportation Research Board, 1920â–2020** Sarah Jo Peterson,2019-12-30 In 1920 state highway engineers federal officials and experts from academia were among a small group convened by the National Academy of Sciences to confront the problems of the highway The public was entrusting them with billions of dollars for good roads and World War I had proved the feasibility of moving freight long distances by truck But even new highways were crumbling They turned to research for solutions The founders of the Transportation Research Board TRB and the generations that followed took on problems such as safety social equity and environmental issues They embraced total transportation adapting their highway research model to urban transportation and then applying it to rail marine and aviation modes Today TRB convenes thousands of researchers practitioners and administrators every year to advise the government solve practical problems foster innovation and stimulate new research In The Transportation Research Board 1920 2020 Everyone Interested Is Invited Sarah Jo Peterson tells the story of how people and institutions created and have continued to shape TRB In a compelling narrative accompanied by more than 150 images exploring the history of transportation and research she argues that TRB can be best understood as an infrastructure one that people purposely designed and devotedly maintained Despite TRB s institutional complexity its unique mission the vast collection of acronyms in its orbit and the significant changes to the organization in its first 100 years Dr Peterson provides a view from 30 000 feet deftly describing the social political and economic context in which transportation and TRB functioned

At the same time she attends to details of the key events individuals and human motivations that shaped TRB's evolution. The author's skills as a historian, her experience in the transportation field and her manifest ability to tell a good story have produced a book that transportation professionals of all stripes and for that matter anyone interested in the history of transportation in the United States should find both engaging and informative and an essential addition to their library.

*Application of Highway Capacity Manual 2010 Level-of-service Methodologies for Planning Deficiency Analysis* James Oliver Ensley, Tennessee. Department of Transportation, National Research Council (U.S.). Transportation Research Board, 2012 Influence on investment in the infrastructure is critical for decision making by State planning departments. Judgments which are made for funding purposes and are based on limited data analysis by states can result in economic disasters for the state and nation. The Tennessee Department of Transportation (TDOT) uses the Evaluation of Roadway Efficiency (EVE) database to prioritize the importance of roadway projects in the state. In addition EVE is also used as a method to provide deficiency analysis results for roadways in the state. This study will add support to the

methodology of the current decision making process in regards to Tennessee roadways for planning Updating the current deficiency analysis program EVE with the methodologies of the Highway Capacity Manual HCM 2010 is the foundation for improving the decision making abilities of those using EVE for such efforts New algorithms have been developed based upon the procedures in the HCM 2010 for the following sections Freeway Two Lane Highways Multilane Highways and Urban Arterials Using these algorithms and data from Washington County in Tennessee level of service results were analyzed and compared to previous deficiency analysis results Some of these results were found to be better and other were found to be worse than the previous The new method of the HCM 2010 applied in this procedure changed 60% of the level of service ratings based on the comparable data This proves to show the update of the deficiency analysis method currently used will be beneficial in the assistance of the decision making process

*Intersections Control and Safety* Antonio Pratelli, 2013-05-22 Starting off a new series on Transport Systems and Traffic Engineering the book aims to help bridge the gap between research and practice encouraging a critical dialogue in different specific subjects spanning innovation development and technology transfer Those who offer innovation often do not meet the immediate needs of practitioners especially in the traditional field of civil engineering Still the adequate diffusion of research results and wisdom derived from practical experience are crucial to both theoretical underpinnings and technical applications The papers forming this book are devoted to intersection control and safety and have been selected bearing in mind the criteria stated above That is these papers provide both scholarly contribution as well as vision for application As a general rule about one third of all highway crashes happen at intersections This rule holds for many different countries Intersection crashes also represent a significant portion of serious injury crashes and by right are receiving considerable attention from researchers and practitioners alike This book is therefore devoted to relevant safety aspects of road intersections and innovative features in design and operations that may address the intersection crash problem The thirteen papers are more or less equally devoted to roundabouts and signals These papers cover many of the most recent and emerging issues related to intersection control and safety Topics range from design details to driver perception from pedestrians behaviour to signal timing and from capacity models to red light running The book will be useful for those wishing to expand their knowledge of this ever important subject area
