Ross, 2012-12-06 Some preliminary observations must be made concerning the nature and purpose of this study What I have attempted here is an essay in the metaphysics of science and not the philosophy of science Rather than concentrating on the details of theory construction and the for mal structure of scientific systems I have treated science as an enter prise a developing process within human experience I have used such an approach in order to analyze science in its relationship to other human enterprises such as art and philosophy and to clarify its unique goals and characteristics Often the concepts employed in descriptions of scientific methods are conceived too narrowly by broadening the focus of attention I have attempted to characterize in a fairly general fashion the goals and methods of science This has led to formulations which may seem at first glance to depart radically from some well established distinctions of the philosophy of science I hope that it will be clear however that such formulations arise at a different level of analysis and

concern very different problems from those of the logic of science In particular I am concerned with the general goals of science These must not be confused with the narrower principles of method employed in science at any given time

Chemistry Education and Contributions from History and Philosophy of Science Mansoor Niaz, 2015-12-23 This book explores the relationship between the content of chemistry education and the history and philosophy of science HPS framework that underlies such education It discusses the need to present an image that reflects how chemistry developed and progresses It proposes that chemistry should be taught the way it is practiced by chemists as a human enterprise at the interface of scientific practice and HPS Finally it sets out to convince teachers to go beyond the traditional classroom practice and explore new teaching strategies The importance of HPS has been recognized for the science curriculum since the middle of the 20th century The need for teaching chemistry within a historical context is not difficult to understand as HPS is not far below the surface in any science classroom A review of the literature shows that the traditional chemistry classroom curricula and textbooks while dealing with concepts such as law theory model explanation hypothesis observation evidence and idealization generally ignore elements of the history and philosophy of science This book proposes that the conceptual understanding of chemistry requires knowledge and understanding of the history and philosophy of science Professor Niaz's book is most welcome coming at a time when there is an urgently felt need to upgrade the teaching of science The book is a huge aid for adding to the usual way presenting science as a series of mere facts also the necessary mandate to show how science is done and how science through its history and philosophy is part of the cultural development of humanity Gerald Holton Mallinckrodt Professor of Physics these are valence bond VB and molecular orbital MO theories He emphasizes the importance of having rival theories and interpretations in science and its advancement He further argues that this VB MO rivalry is still alive and together the two conceptual frames serve as the tool kit for thinking and doing chemistry in creative manners The author surveys chemistry textbooks in the light of the how the books preserve or not the balance between the two theories in describing various chemical phenomena This Talmudic approach of conceptual tension is a universal characteristic of any branch of evolving wisdom As such Mansoor's book would be of great utility for chemistry teachers to examine how can they become more effective teachers by recognizing the importance of conceptual tension Sason Shaik Saere K and Louis P Fiedler Chair in Chemistry Director The Lise Meitner Minerva Center for Computational Quantum Chemistry The Hebrew University of Jerusalem ISRAEL
